1.1

Triseal® Two Inch System Retrievable Access Fitting Assembly

The TRISEAL®* Two Inch System makes it possible to insert and retrieve a complete range of corrosion monitoring, erosion monitoring, biomonitors, hydrogen monitoring, chemical injection and sampling system probes, quills and nozzles whilst the operating system, vessel or pipeline remains operational and at full operational pressure.

A comprehensive range of access fitting assemblies are available in a wide range of styles and materials.

The Two Inch System Access Fitting Assemblies consist of:

1. The Access Fitting Body.
2. A Solid or Hollow Plug
3. A Thread Protecting Cover (Optional)

The Design of the Access Fitting Bodies conforms with the below listed standards and codes:

- ASME B31.3
- API RP 14E
- ASME/ANSI B16.5
- NACE MR-0175

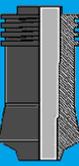

All components of the TRISEAL* System Two Inch System are interchangeable with existing 2 inch high pressure access systems from other manufacturers following industry standard design.

*TRISEAL is a Registered Trade Mark of RCSL Corrosion Monitoring

Examples

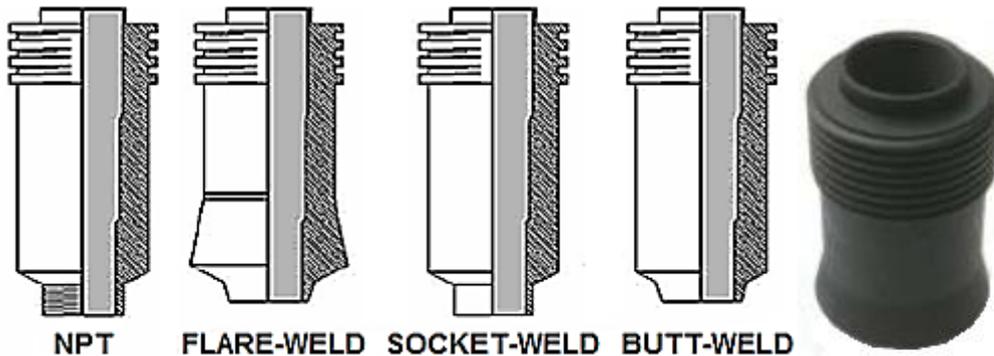

- To order an Access Fitting Body only, please generate the Product Code as per the below example.
Example: 2" 4/600# ANSI RTJ Access Fitting, ¼ inch NPT tee, Duplex SS, without coating = Product Code: TS51b35-000-00-0.
- To order a Body with a Plug Assembly, please generate the Product Code as per the below example.
Example: Flare-weld access fitting, ¾ inch drilled tee, for pipeline size of 4 inch, ASTM A105 Carbon Steel, with 316 S/S Solid Plug, Viton O-Ring and PTFE Primary Packing, without coating = Product Code: TS13a32-111-00-0.
- To order a Body with a Plug Assembly and a Cover, please generate the Product Code as per the below example.
Example: Flare-weld Access Fitting, non-tee, flat base profile, ASTM A105 Carbon Steel, with 316 S/S Solid Plug, Viton O-Ring and PTFE Primary Packing, Heavy Cover without hole in AISI 1022 CS, RCSSL standard coating = Product Code TS10a82-111-11-1

Application	Description	Product Code	
Maintenance of threads in the Access Fitting Body	Thread Tap Assembly, M2 Steel	700111	
Maintenance of threads on the Solid and Hollow Plug Bodies	Thread Die Assembly, M2 Steel	700112	
Removal of rust, scale etc. from the plug seat in the Access Fitting Body	Seat Reamer	700113	
For the removal of debris from the Access Fitting Body threads	Thread Brush	700114	
Maintenance of the 3 inch ACME thread on the Access Fitting Body	3 inch Acme Thread Cleaner	700115	-
Multi-purpose Grease	Lithium Grease	700116	-
For use in light hydrocarbon liquids	Silicone Grease	700117	-
For cleaning sand and debris from the Access Fitting Body Threads before installation of Solid and Hollow Plugs under pressure	Cleaning Tube Assembly	700118	-

1.5 Two Inch System Retriever Unit

The Retriever and Service Valve permit safe and simple removal of the full range of retrievable monitoring probes, coupon holders and chemical injection whilst the pipeline or vessel is under operating pressure.

For ease of reference, the item to be retrieved is herein after referred to as the “device”.

The retrieval tool has been designed to operate on the principal of balancing the pressure acting on the internal surfaces of the tool so that no resultant force is applied to the retriever moving parts whilst the equipment is being operated.

Retriever tools are sized to accommodate different pipeline pressures and probe/device lengths. All the materials of construction comply with the requirements of NACE standard MR-01-75 (92).

Retriever and Service Valve Kits include a heavy duty carrying case, maintenance tools and spare seals. A comprehensive Operation and Maintenance Manual is also included. Seal and Repair Kits are available separately at a moderate cost.

Operator training is minimal and is easily achieved once the basic principles of operation are understood. Training courses are available both on-site and off-site as required.

250 bar and 400 bar retrievers are available, these both feature stainless steel outer barrels.

A light weight retriever option is also available. This features an Aluminium outer barrel and is rated at 100 bar.

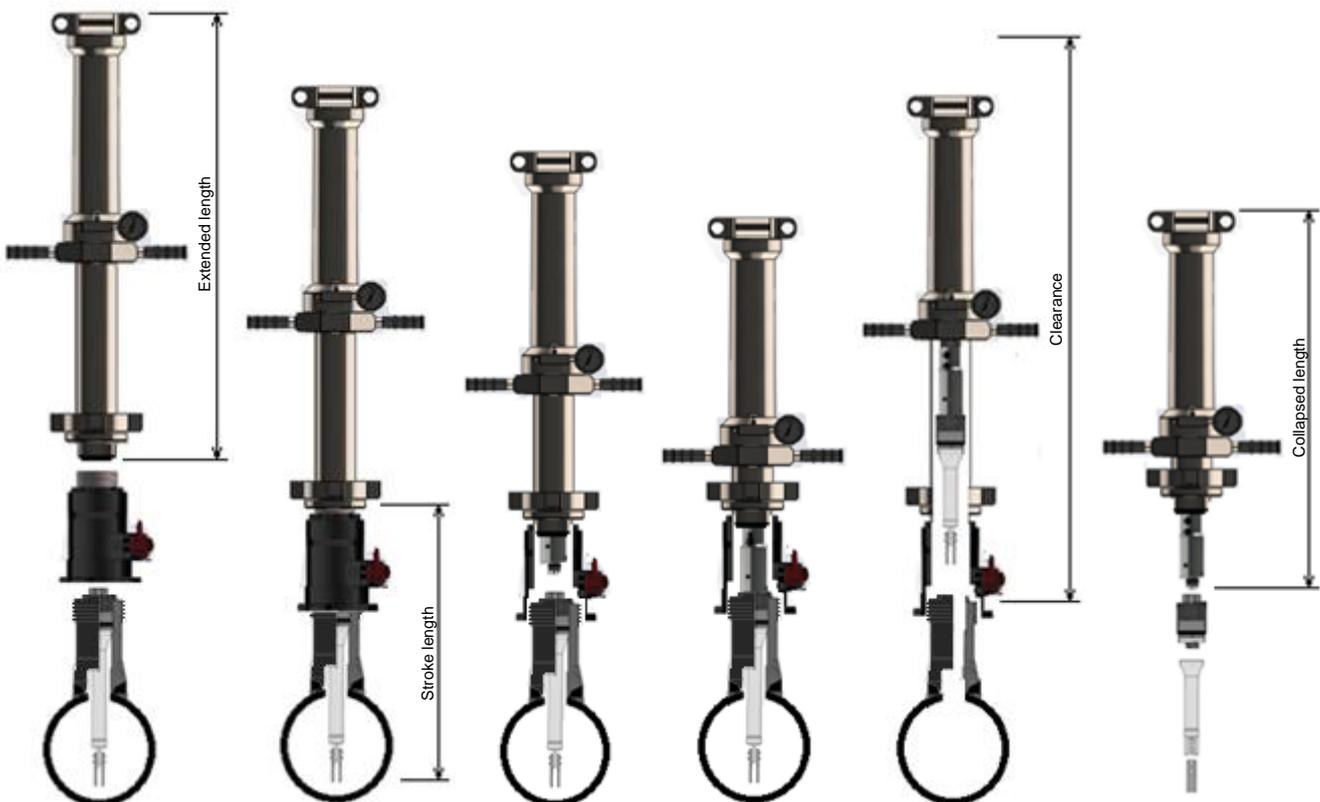

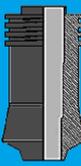

Figure A

1.5 Two Inch System Retriever Unit

How To Order

- 1) Retrievers are selected by the length of stroke required. The stroke is the distance the Plug Assembly and the device must travel from within the Access Fitting body, through the Service Valve allowing the valve to be closed.
- 2) From Figure A (page 1) and Table A (below) determine the Retriever stroke length required to retrieve the device. Please note that the maximum retrieval length varies depending upon whether the retriever is being used with a solid plug or a hollow plug. Also when calculating for injection / sampling / sand probe systems ensure to add the length of the associated nut to the quill / probe (device) length.

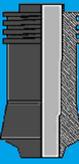

Table A Nominal Stroke	Stroke (mm)	Max. Length (mm)		Total Length (mm)		Removal Clearance	Product Code		
		With Solid Plug	With Hollow Plug	Collapsed	Extended		100 Bar	250 Bar	400 Bar
12"	305	76	51	496	804	1058		700631

Note: Please order 250bar seal kit and repair kit for use on 100 bar retriever.

Please see the service valve datasheet for detail on the service valves and their associated Product Codes.

1.6 Two Inch System Service Valve Kits

Service valves are required to connect the retriever tool to the Access Fitting to be serviced; its primary function is to contain the line pressure whilst the monitoring probe/injection device is replaced or removed.

Designed for ease of use in connection with a Retriever Tool, Service Valves are ball type valves with full opening port and feature two Bleed Valves which permit easier operation at high pressures. One valve allows pressure equalisation on both sides of the valve, thus allowing the valve to be opened without torque problems. The second valve allows pressure or product to be bled to atmosphere or for product sampling.

All service valves comply with NACE MR-0175 (92 Rev) requirements for materials suitable for use in sour service conditions.

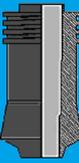

Service Valves are available rated for 250 bar (3600psi) and 400 bar (5700psi). Service Valves rated 250 bar are extremely compact with a total weight of 23 kilos.

How to order:

- Service Valve Kit – 250 Bar – Part No 700187
- Service Valve Kit – 400 Bar – Part No 700191

Spare Parts		
Description	Pressure Rating	Product Code
Service Valve Repair Kit	250 Bar (3600 psi)	700051
Service Valve Seal Kit	250 Bar (3600psi)	700052
Service Valve Repair Kit	400 Bar (5700psi)	700053
Service Valve Seal Kit	400 Bar (5700psi)	700054

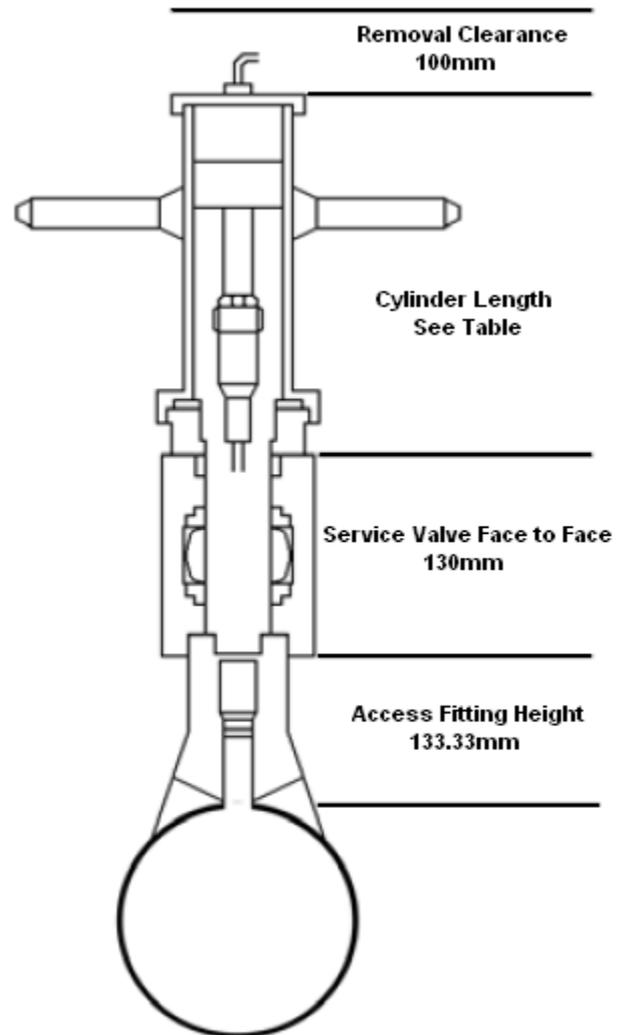

1.7 Two Inch System Model HPH Hydraulic Retriever and Service Valve Kits

The Model HPH Hydraulic Retriever Tool is a single cylinder retriever of fixed length which is equilibrated at the same pressure as the pipeline or vessel to be serviced. An internal piston may be moved up or down by changing the pressure in the upper barrel of the retriever. Pressure differential of a few PSI is sufficient to move the piston. Downward movement is obtained by pumping oil into the upper part of the retriever using a small portable pump; upward motion is achieved by returning oil to the oil tank. Internal safety devices are provided to prevent excessive pressure differentials from being developed across the piston.

A Socket Adaptor Assembly is attached to the Internal piston. A Pilot on this Adaptor mates the assembly to the standard Triseal® 2" System Solid or Hollow plug.

When the piston is moved to the lower part of the retriever it may be connected to the retriever barrel which is then turned to screw or unscrew the Plug Assembly from the Triseal® access fitting body.

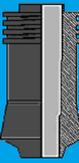

Minimum clearance requirements, minimum weight and full compatibility with all generic access fittings are major features of the HPH Retriever tool.

Triseal ® is the Registered Trade name of RCSL Corrosion Monitoring

Two Inch System Model HPH Hydraulic Retriever and Service Valve Kits

HPH Retriever Ordering Information

How to Order:

1. Retriever size is determined by the length of piston movement required within the retriever cylinder. This is the distance of a plug assembly and probe must travel from within the access fitting body and through the service valve allowing the valve to be closed.
2. Determine the maximum working pressure required
3. Determine the maximum probe length required to be retrieved
4. From the tables below select the most suitable kit Product Code

250 Bar Maximum Working Pressure

Retriever Kit Product Code	700834	700835	700836	700837	700838	700839	700840	700841	700842

1.8
Two Inch System Hot Tap Tool
Product Code: HA102102

The hot tap tool provides a safe and reliable method of hot tapping high pressure access fittings on pressurised pipelines or vessels.

A special cutter assembly is installed in the access fitting, previously welded onto the pipe. To tap a hole through the pipe wall, a service valve is installed on the fitting. This allows the cutter fitting to be isolated, if necessary.

The hot tap tool is mounted on the service valve and mated to the cutter. The drive screw on the hot tap tool puts pressure on the cutter as the tool shaft is rotated to cut through the pipe wall.

After the hole is cut through the pipe wall, the tool is removed from the valve and the retrieval tool is then used to pull the cutter assembly and pipe plug from the fitting. Shavings and cuttings are removed using swabs or brushes.

The hot tap procedure may be expedited by use of an air operated drill motor to turn the cutter shaft. Safety is enhanced in the assembly because the cutter is isolated from the atmosphere by a service valve.

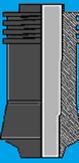

At any time in the procedure, the cutter drive shaft may be retracted and the fitting and its contents isolated from the atmosphere by closing the service valve.

The hot tap tool is designed to be used with 5.25" Flare-weld or Butt-weld access fitting systems.

A compatible service valve is required for use with the hot tap kit, the product code is HA101250

Hot Tap Kit HA102102 Components & Spare Parts

Magnetic Swab Assembly	HA102003	Seal Repair Kit	7213A

The above tools are furnished as standard equipment with each complete Hot Tap Tool Kit. In addition common tools such as 3/16" Punch, large Crescent Wrench and large screwdriver may be necessary.

1.9 Model 600 Retractable System Access Valve

The Model 600 Access Valve Assemblies are designed to allow access to pressurised areas without process shutdown, using the retractable system.

Versions are available for threaded or for flanged connection.

The assembly shown at right consists of:

1. Threadolet
2. TBE Nipple
3. Ball valve
4. 5" inter-joint nipple
5. Thread adaptor (if required)

NOTE: The 5" nipple is used as standard, and is suitable for all probe elements except coupon holding shields which require a 9" nipple.

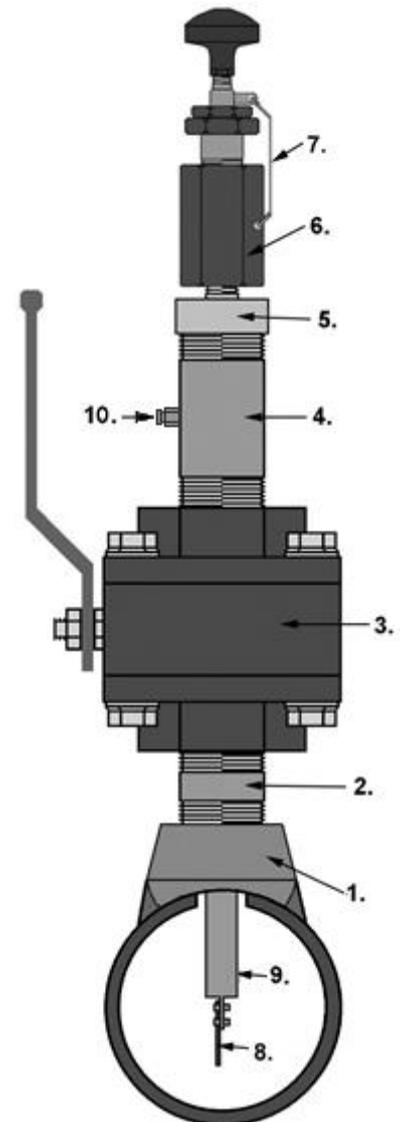

It is recommended that the inter-joint nipple has a bleed valve (10.), to allow release of pressure prior to removing the retractable device.

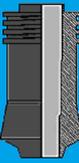

The full port valve can be supplied in whichever materials customer requires, as standard carbon steel body with 316 stainless steel trim would be supplied, with seals and materials of construction complying with NACE standard MR0175.

Flanged Outlets to connect with a pipeline or vessel mating flange are available.

The Model 600 Access Valve Assembly is suitable for use with a range of retractable products, including ER4**0 Electrical Resistance Probes, LP4**00 Linear Polarisation Resistance Probes, RT4000 Coupon Holder, IP4000 Injection as well as Hydrogen, Sand and Galvanic Probes.

The example shown at right features threaded connections and is portrayed being used with an RT4000 retractable coupon holder (items 6-9 are the coupon holder and coupon).

1.10 Model SR2159 “Easy Tool” Retractor For The Retractable System

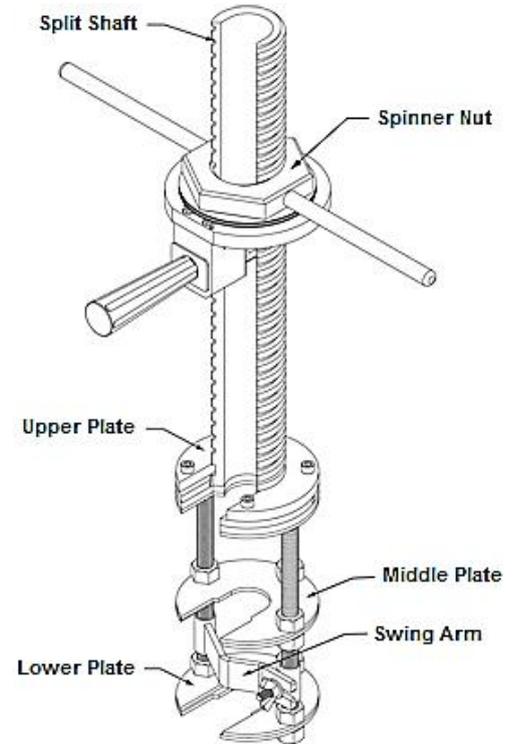

The Easy Tool Retracting System is designed for the safe insertion or retraction of 4000 series systems, including electrical resistance probes (ER), linear polarisation probes (LP), coupon insertion systems (RT), and chemical injection systems (IP).

RCSL Corrosion Monitoring Systems recommends that an Easy Tool is used when working on systems with pressures over 150 psi, to control the retraction of the 4000 series product.

The Easy Tool can insert/retract standard electrical resistance probes and coupon insertion systems up to 42".

With a weight of under 15 pounds and an overall length of 44", the Easy Tool is one of the lightest and shortest retracting tools available on the market.

The Easy Tool can be used with most standard packing glands.

2.0 Corrosion Coupons, Coupon Holders & Accessories

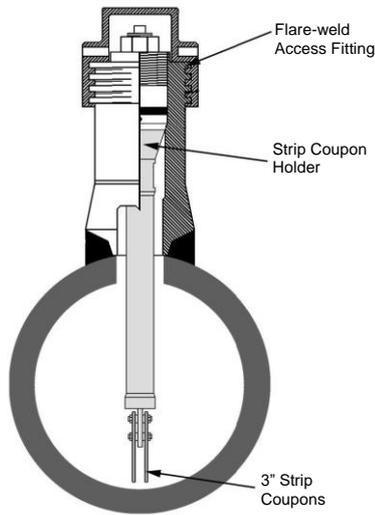

Sub-Section No.

- 2.1 HC Series Coupon Holders
- 2.2 Coupons for the Two-inch System
- 2.3 Model RT6000 Flanged Coupon Holder
- 2.4 Model RT4000 Retractable Coupon Holder
- 2.5 Corrosion Coupons & Test Supplies For The Water Treatment Industry
- 2.6 Model 2277 Direct Mount Coupon Holder

2.1 Two-Inch System HC Series Retrievable Coupon Holders

HC Series Coupon Holders are used in conjunction with the TRISEAL® High Pressure Access Fitting Assembly.

The Coupon Holder is attached to the Solid Plug Assembly by means of a standardised left handed threaded connection and it also retains the primary packing.

The standard material for coupon holders is 316 SS, other alloys are available as required to meet the specific requirement.

Coupon holders are available in lengths from 2.50 inches to 36 inches. Longer lengths can be supplied subject to passing wake frequency calculations.

Coupon holders are supplied complete with a fitting kit for the applicable coupon.

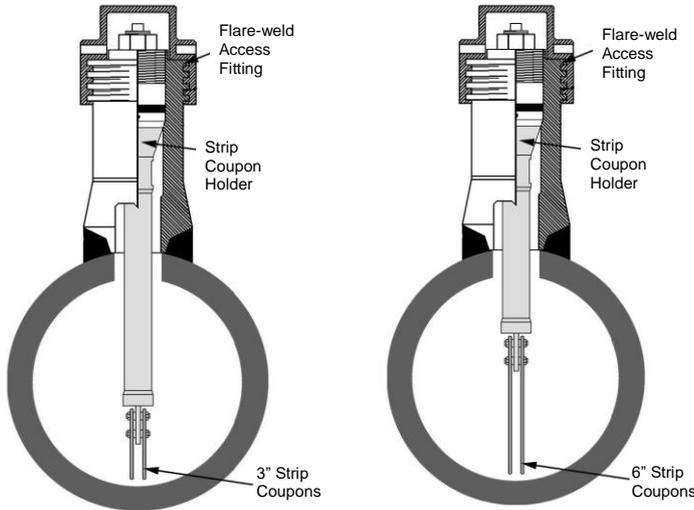

Corrosion Coupons can be supplied in most alloys, please see our separate data sheet for more details of the coupons.

2.1 Two-Inch System HC Series Retrievable Coupon Holders

Strip Coupon Holder

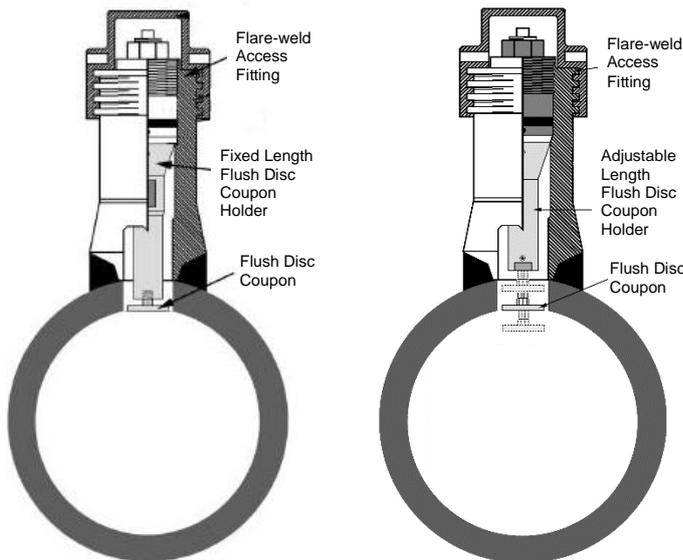

Strip coupons are designed for intrusive monitoring and are suitable for monitoring any kind of pipe at any location within the pipe.

Standard strip coupons are available in "3inch" (2.875" x 0.875" x 0.125" and 6inch (6" x 0.875" x 0.125") variants.

Both coupon sizes have 2x mounting holes at one end, the holes are pre-fitted with insulators in Nylon (standard) or PTFE (optional).

Flush Disc Coupon Holder

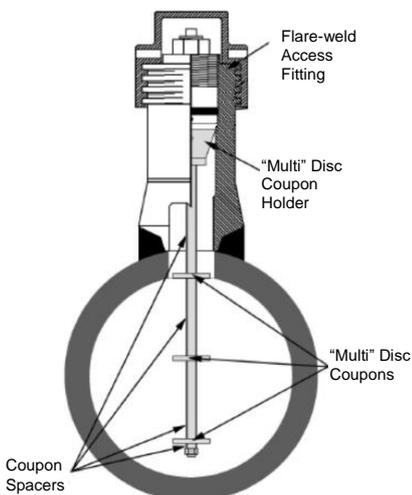

Flush disc coupon holders are primarily intended for use in areas where pigging operations prohibit the use of coupons that project into the process flow and are also suitable for use in pipelines carrying gas.

Additional advantages are the lack of requirement to orient the coupon relative to the flow direction and a greater exposed surface area at the pipe wall.

Flush disc coupon holders are available as fixed length and as adjustable length, to suit the specific application.

Flush disc coupons measure $\varnothing 1.25"$ x 0.125" with a central countersunk hole

Multiple Disc Coupon Holder

Multiple Disc Coupon monitoring is suitable for pipes with I.D. greater than 6.00 inches.

Multiple Disc Monitoring permits coupons to be placed at a specific level in multi-phase or stratified flow.

The coupons are insulated from the holder rod by Nitrile O rings. Delrin or Nylon Spacers are used to provide insulation between coupons.

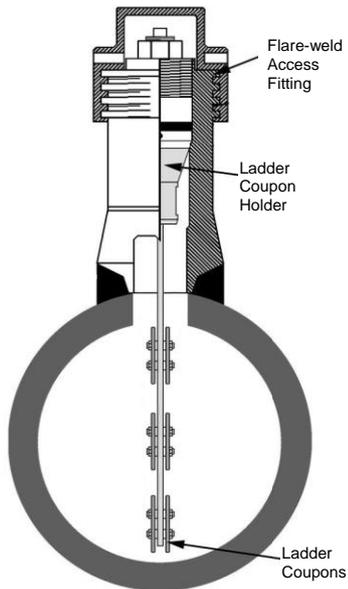

Materials of construction satisfy the requirements of NACE MR-01-75

"Multi" Disc Coupons measure $\varnothing 1.25"$ x 0.125" with a central plain mounting hole

2.1 Two-Inch System HC Series Retrievable Coupon Holders

Ladder Strip Coupon Holder

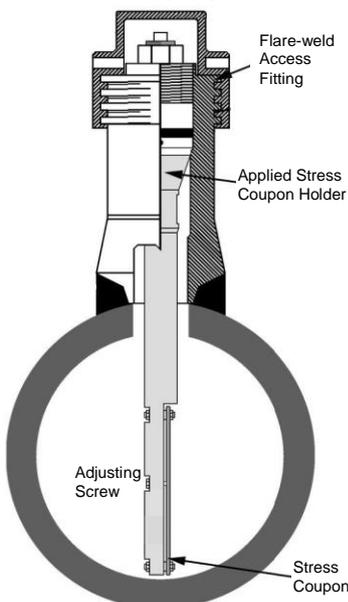

Ladder Strip Coupon Monitoring is suitable for pipes 8 inch O.D. and greater.

The coupon holder body is a single blade containing holes spaced along its length for mounting the coupons.

Ladder strip coupons measure 2" x 0.875" x 0.125", with 2x mounting holes.

A minimum coupon holder length of 26 cm (10.25") is required to mount three pairs of 2" ladder coupons.

Applied Stress Coupon Holder

Applied Stress Coupons are 152mm (6 inches) long, 22.3mm (0.875 inches) wide, 3.18mm (0.125 inches) thick. An insulated adjusting screw located on the coupon mid-point applies stress to the coupon.

Note: Applied stress coupons have been stamped on the end because this is the lowest stress area and cracking is not expected to be initiated by the identification mark.

Applied stress is determined from the number of adjusting screw turns or bending deflection. The coupons are first stressed and then installed in the line. The time required for cracks to develop is determined by pulling coupons at regular intervals, usually 24 hours to 30 days. Test duration will vary with the stress level applied to the coupon. The time to crack may then be used as a measure of stress corrosion resistance.

Test start time begins when stress is applied and the stressed coupon is exposed to the corrosive environment, whichever occurs later. The coupon is considered to have failed when cracks appear. The cracks may be detected by optical, mechanical or electrical means.

Cracking time is the elapsed time from test start until the appearance of cracks.

Formula for Applied Stress Coupons:

$$S = 6Et_y/H$$

Where:

S = maximum tensile stress

E = modulus of elasticity

t = thickness of coupon

y = maximum deflection

The formula is for longitudinal stress in the outer fibers of the coupon, below the elastic limit of the material. At stress above the elastic limit, but below the yield strength at 0.2% error results. The formula must not be used above the yield strength of the material.

NOTE: The formula is based on small deflections i.e. y/H is less than 0.1.

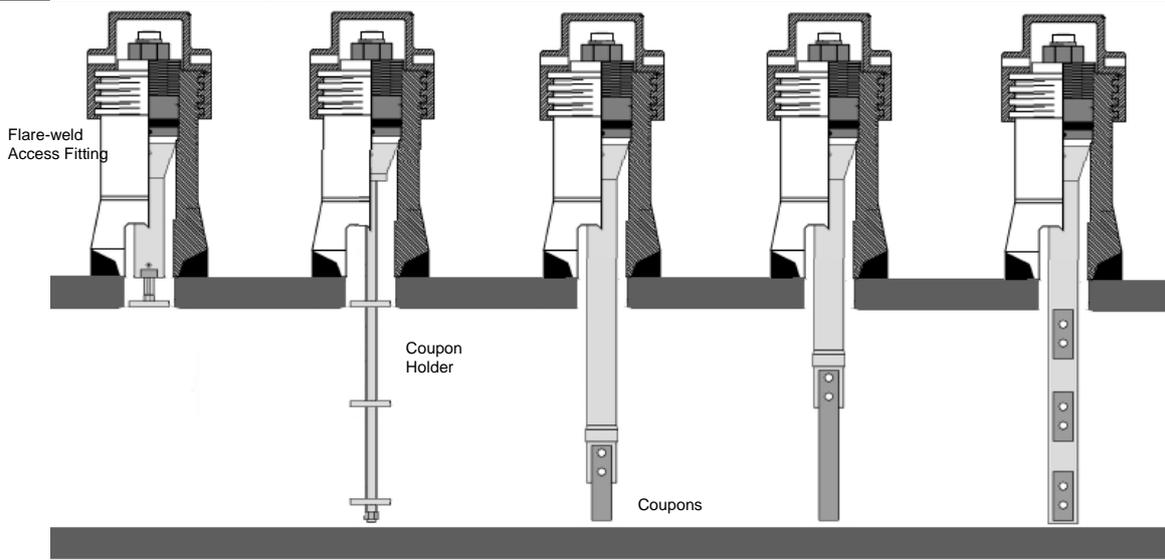

2.2

Coupons for the Two-Inch Retrievable Access Fitting System

Corrosion coupons are available in a range of alloys. As standard coupons are ground to shape with a blast surface finish.

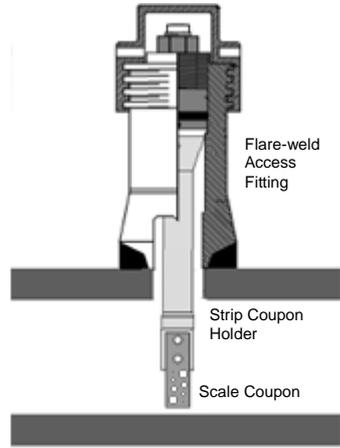

Coupon ordering product codes are generated as XXX-“Alloy”
For example 111-1018 = 3inch strip coupon in C1018 carbon steel.

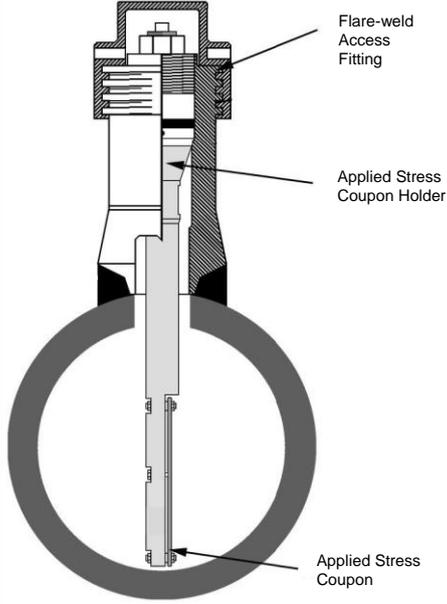

Standard Coupons				
				
FLUSH DISC	MULTIPLE DISC	3” STRIP	6” STRIP	2” LADDER
<p>3 Inch Strip Coupons Product Code: 111-“Alloy”</p> <p>Dimensions: 73 x 22 x 3.2mm (2.875in x 0.875in x 0.125in)</p> <p>Two mounting holes at one end centred, holes are fitted with insulators (nylon as standard, other materials are available)</p> 		<p>6 Inch Strip Coupons Product Code: 169-“Alloy”</p> <p>Dimensions: 152 x 22 x 3.2mm (6in x 0.875in x 0.125in.)</p> <p>Two mounting holes at one end centred, holes are fitted with insulators (nylon as standard, other materials are available)</p>		
		<p>Ladder Strip Coupons, Product Code: 197-“Alloy”</p> <p>These are designed for simultaneous corrosion monitoring at top, middle and bottom positions in a pipeline of 8inches in diameter or larger.</p> <p>Dimensions 51 x 22 x 32mm (2in x 0.875in x 0.125 in)</p> <p>Two mounting holes centred, holes are fitted with insulators (nylon as standard, other materials are available)</p>		

2.2

Coupons for the Two-Inch Retrievable Access Fitting System

<p>Flush Disc Coupons Product Code: 142-“Alloy”</p> <p>Typically utilised where the coupons should not extend into the pipe or interfere with the media flow or pig passage, or for gas applications.</p> <p>Dimensions: Ø31.8 x 3.2mm (Ø1.25in x 0.125in)</p> <p>Central countersunk mounting hole. Insulators are available separately as part of the coupon fitting kit.</p>	<p>Multi-Disc Coupons Product Code: 141-“Alloy”</p> <p>These are utilised for stacked multiple phase monitoring when the line diameter is 6 inches or more. For pipelines less than 6 inches it is recommended to use single disc.</p> <p>Dimensions Ø31.8 x 3.2mm (Ø1.25in x 0.125in)</p> <p>Central mounting hole</p>
<p>Scale Coupons: Product Code: 185-“Alloy”</p> <p>These are the same size as the 3inch strip coupon, but have a series of holes of different sizes. Scale usually forms on cavities therefore it is likely to form on small sized holes, which holes are blocked by scale provide an indication of scale build-up.</p> <p>Dimensions: 73 x 22 x 3.2mm (2.875in x 0.875in x 0.125in)</p> <p>Two mounting holes at one end centred, holes are fitted with insulators (nylon as standard, other materials are available)</p> <div data-bbox="1145 712 1485 1160" style="float: right; text-align: right;">  <p>Flare-weld Access Fitting</p> <p>Strip Coupon Holder</p> <p>Scale Coupon</p> </div>	

Special Coupons	
<p>Applied Stress Coupons:</p> <p>These are used where sulphide stress corrosion cracking is a factor.</p> <p>Applied Stress Coupons are 152mm (6 inches) long, 22.3mm (0.875 inches) wide, 3.18mm (0.125 inches) thick. An insulated adjusting screw located on the coupon mid-point applies stress to the coupon.</p> <p>Note: Applied stress coupons have been stamped on the end because this is the lowest stress area and cracking is not expected to be initiated by the identification mark.</p>	<div data-bbox="1066 1288 1513 1892" style="text-align: right;">  <p>Flare-weld Access Fitting</p> <p>Applied Stress Coupon Holder</p> <p>Applied Stress Coupon</p> </div>
<p>Residual Stress Coupons:</p> <p>These are rectangular coupons similar to the 3 inch strip coupons, but are deformed to create residual stress. This type of coupon stimulates any corrosion effect due to the residual stress present in combination with an embrittling environment.</p>	
<p>Crevice Corrosion Coupons:</p> <p>These are made from the standard Disc Coupon, dimensions 31.8 dia. x 3.2mm (1.25 inch dia. x 0.125 inch) with a nylon disc on each side held in position by a stainless steel screw.</p>

2.3 Model RT6000 Fixed Length Coupon Holder, Flanged Connection

The Model RT 6000 is a fixed-length, flange-mounted, coupon insertion system, suited to applications where coupon replacement can coincide with scheduled plant shut downs, thus avoiding the additional expense and complexity of access fittings and retrieval / retractor tools.

The RT6000 is ideally suited for use in high pressure and / or hazardous applications where threaded fittings are not available or not recommended.

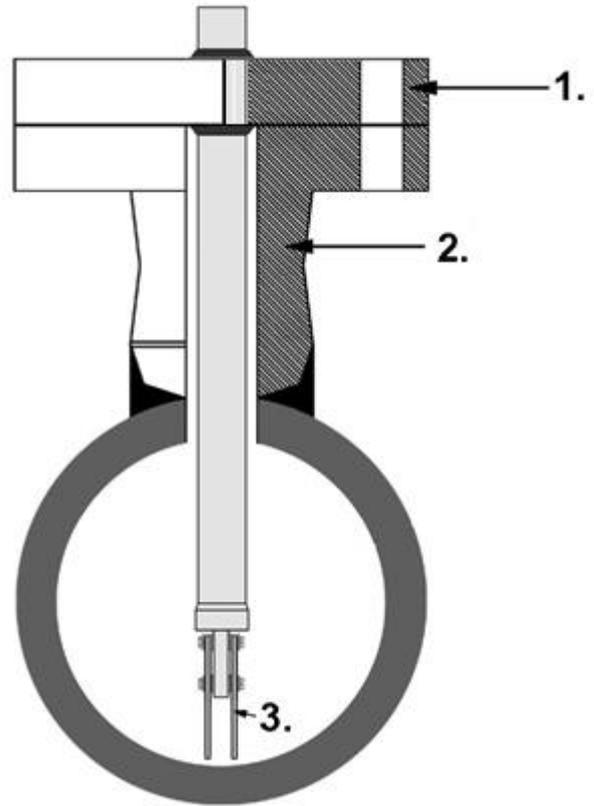

Insertion length (I.L.) is calculated to the end of the coupon and is based on a 1 inch total flange thickness.

Customers can specify any length required.

For standard coupons, the maximum insertion length is given in the chart below (the insertion length is fixed at the factory).

The system components are as follows:

1. RT6000 Coupon Holder
2. Mounting flange
3. Coupons

Specifications			
Coupon Holder Body	As required by customer	Order Length	I.L. (max)**

2.4 Model RT4000 Retractable Coupon Holder With Packing Gland

Pictures are for illustrative purposes only, other mounting options are available

Model RT4000 coupon insertion system is a retractable unit commonly used in field and plant applications.

A specially designed packing gland is used to insert or retract a coupon from a pressurised system without a process shutdown.

The insertion system is designed to mount onto a 1" piping system, but can easily be adapted to fit your specific requirements.

The system consists of an insertion rod with a coupon adapter, and a packing gland. A safety chain and safety nut are also provided to prevent blowout. The insertion length (I.L.) is adjustable up to the maximum shown below.

Standard packing material in the packing gland is Teflon®, however, Grafoil packing can be provided for high temperature applications.

Coupon holders are available in various lengths and to suit various coupons, please see page 2 for ordering information.

Key	
1 – Coupon (strip type shown)	5 – TBE Pipe Nipple (usually fitted with bleed valve)
2 – Thredo-let (flanged connection is available)	6 – Thread adaptor (if required)
3 – TBE Pipe Nipple	7 – Packing gland
4 – Full Bore Ball Valve (flanged connection is available)	8 – Safety chain
	Items 1-6 are supplied separately from the RT4000

2.5

Corrosion Test Supplies for the Water Treatment Industry

Accurate monitoring of corrosion rates in any environment is critical when viewed in terms of the maintenance and repair costs associated with corrosion and material failure. Test coupons can provide an inexpensive means of effectively monitoring corrosion levels in a system. By observing the mils-per-year corrosion rate of an exposed coupon, valuable information can be provided regarding the material's life expectancy.

RCSL Corrosion Monitoring provides the water treatment industry with a wide assortment of corrosion test supplies. We specialise in expeditious order processing of test coupons made according to your needs for material, size, shape and finish.

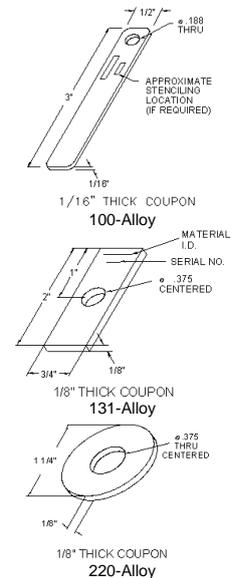

Coupons can be stencilled with alloy and sequence numbers for proper identification and pre-weighed and measured to help assure the integrity of your test data.

Mill test reports, identifying element compositions of materials used, can be provided for coupons if required, please advise this when ordering.

Coupon Product Codes are 3 digits and then the required alloy, for example 100-C1010.

Corrosion Test Supplies for the Water Treatment Industry

Cylindrical Coupons (C1018 STD)

P/N	SIZE	THREAD	SLOT
ES200	¼" x 2.5"	¼"-20 x ¾"	1/16"
ES201 ¼" x 2"	¼" x 2"	¼"-20 x ¾"	1/16"
ES202	¼" x 3"	¼"-20 x ¾"	1/16"
ES204	¼" x 1½"	¼"-20 x ¾"	1/16"

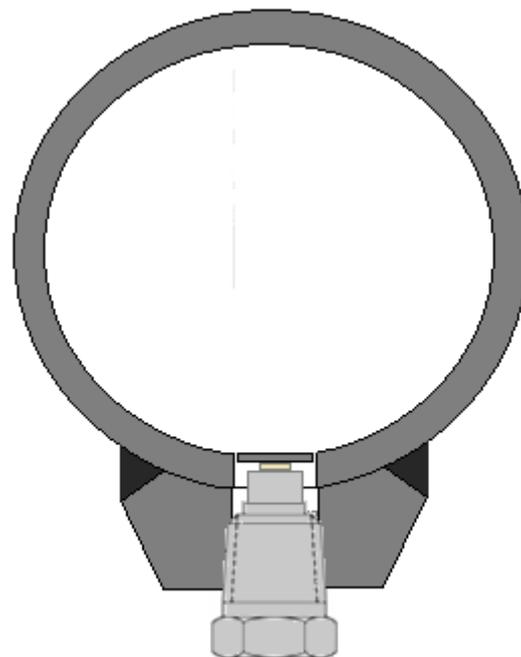

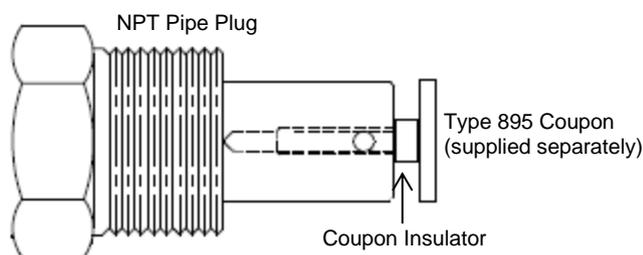

For a full range of alloys available, please contact our sales department.

Coupons can be furnished with a variety of finishes depending on your particular application. Some of the typical finishes are defined below:

- **Mill** – finish as produced from mill.
- **Glass Bead** – blasted with fine glass beads to remove mill scale.
- **120 Grit** – fine finish using a 120 grit belt and commonly used in corrosion tests, such as pitting studies, where smooth surface finish is desired. Finishes up to 800 grit (extremely fine) can be provided by using belt sanders.
- **Double Disc Ground** – extra fine finish using an abrasive disc that leaves minimal residual grit. Excellent for studies where surface finish is critical. Capable of producing 16-32 RMS finishes on common steels and 8 RMS on carbide steels.

2.6 Model 2277 Fixed Length Disc Coupon Insertion System

The Model 2277 is a fixed-length, thredolet-mounted, disc coupon insertion system.

Process shutdown or process isolation is required for installation and inspection. The coupon holder assembly consists of an insertion rod with integral coupon holder and Male NPT pipe plug.

Insertion length (I.L.) is calculated to the end of the coupon in this case. Customers can specify any length required.

Rose Corrosion will need to know the required length from the base of the pipe plug to the end of the coupon. This can be calculated by RCSL if required.

Materials of construction can be specified by customer. Standard body material is 316/316L S/S.

The Type 895 coupon is supplied separately. The required Type 895 disc coupon dimensions are $\text{Ø}3\frac{1}{8}\text{inch} \times \frac{1}{8}\text{inch}$. Coupon material can be specified by client.

Example coupon ordering Product Code: 895-1018, for Type 895 flush disc coupon in 1018 CS. The minimum coupon ordering quantity is 10pcs.

3.1
Model ER0250
Electrical Resistance Probe
 For Atmospheric Service

Model ER0250 is a probe used to monitor corrosion in atmospheric environments. The probe consists of an element which is mounted onto an epoxy board. One side of the element is exposed to the corrosive environment while the other side is covered, acting as a reference element. The ER0250 connects to a special cable that allows it to be used with electrical resistance probe instrumentation. Replacement elements may be ordered without cable. The probe comes with a 3/16" hole for easy mounting.

Specifications	
Probe Body	Epoxy
Temperature Rating	121°C / 250°F
Standard Element sizes	4 or 8 mils (useful range is half of thickness)

For alloys, sizes, or other special requirements not listed, please contact our sales department.

3.2
Model ER0500
Electrical Resistance Probe
 For Under Ground Service

The Model ER0500 corrosion probes are designed for heavy duty service conditions such as underground and structural monitoring of pipelines, vessels, above and below ground storage tanks and structures - whether cathodically protected or not.

The surface strip element assembly is suited to the “construction site” environment.

The cylindrical element is economical and durable. Its slim profile is convenient for locations with restricted access such as concrete bridge structures and other infrastructure applications.

Both probes provide good sealing of the reference element and the check element provides confidence in the continued performance of the corrosion sensor.

Either probe may be connected to a cathodically protected structure using the attached grounding lead. This allows the probe to measure the effectiveness of the Cathodic Protection (C.P.) System under operating conditions.

If left unconnected from the structure, the probe monitors the direct corrosivity of the soil or environment. The grounding lead is installed at the connector end, unless otherwise specified. This enables connection to the C.P. System to be made as required even after probe installation.

3.3
Model ER1000
Electrical Resistance Probe With Loop Element
 For Direct Mounting Via 1/2" NPT Pipe Plug

The Model ER1000 Electrical Resistance Probe is a fixed-insertion-length probe with a 1/2" NPT pipe plug.

The probe requires process isolation or process shutdown to install and a threaded pipe fitting to mount.

With a maximum diameter of 1/2", the probe is ideal for applications where space is limited.

The probe consists of an insertion rod with an element, a hermetically sealed connector, a 1/2" NPT fitting, and a velocity shield, which are all welded in place.

The insertion length (I.L.) is calculated to the end of the shield and can be specified by the customer. For standard probes, the maximum insertion length is given in the chart on page 2 of this data sheet.

Several standard loop elements and lengths are available to meet your specific needs. (Refer to the Element and Alloy Selection Chart for more information.)

3.4
Model ER2000
Electrical Resistance Probe With Loop Element
 For Direct Mounting Via 3/4" or 1" NPT Pipe Plug

All dimensions are in inches

The Model ER2000 Electrical Resistance Probe is a fixed-insertion-length probe with a 3/4" NPT pipe plug.

The probe requires process isolation or process shutdown to install and a threaded pipe fitting to mount.

The probe assembly consists of an insertion rod with an element, a hermetically sealed connector, a 3/4" NPT fitting, which are welded in place.

A velocity shield can be provided if required.

The insertion length (I.L.) is calculated to the end of the shield and can be specified by the customer. For standard probes, the maximum insertion length is given in the chart on page 2 of this data sheet.

Several standard loop elements are available to meet your specific needs.

Model ER2100
Electrical Resistance Probe With Cylindrical Element
 For Direct Mounting Via 3/4" or 1" NPT Pipe Plug

The Model ER2100 is a fixed-length, electrical resistance probe with a 3/4" or 1" NPT pipe plug. The probe requires process isolation or process shutdown to install and a threaded pipe fitting to mount.

The all-welded construction allows the probe to be used in harsh environments.

The probe assembly consists of an insertion rod with an element, a hermetically sealed connector, and a 3/4" or 1" NPT fitting, which are all welded in place. A velocity shield can be provided if required.

The insertion length (I.L.) is calculated to the end of the shield or to the end of the element if a shield is not present. Probe length can be specified by the customer. For standard probes, the maximum insertion length is given in the chart on page 2.

Several standard elements are available to meet your specific needs.

Model ER3000
Adjustable Electrical Resistance Probe With Loop Element
 For Direct Mounting Via 3/4" or 1" NPT Pipe Plug

The Model ER3000 is an adjustable-length, electrical resistance probe with a 3/4" NPT compression fitting. The compression fitting allows the probe to be inserted into the process to the required length.

The probe requires process isolation or process shutdown to install and a threaded pipe fitting to mount.

The probe consists of an insertion rod with an element, a hermetically sealed connector, a 3/4" compression fitting, and a safety nut to prevent blow out.

A velocity shield can be added to the assembly if required.

Several standard elements are available to meet your specific needs.

Model ER3110

Adjustable Electrical Resistance Probe With Cylindrical Element Non Metallic Probe Body & 3/4" NPT Pipe Plug

Model ER3110 is an adjustable-length, electrical resistance probe with a 3/4" NPT compression fitting and a non-metallic probe body.

The compression fitting allows the probe to be inserted into the process to the required length. The non-metallic body provides electrical isolation between the probe element and the vessel.

This can be useful in systems where galvanic problems and stray currents may cause accelerated corrosion of the probe element, causing an over-estimation of the system's corrosion rate.

The probe requires process isolation or process shutdown to install and a threaded pipe fitting to mount.

The probe assembly consists of an epoxy-filled insertion rod with an element, a 6-pin connector, and a 3/4" compression fitting. The insertion length (I.L.) is calculated to the end of the element. The maximum insertion length (I.L.) is 9.5".

Several standard elements are available to meet your specific needs.

Specifications	
Probe Body	Glass Epoxy
Element Seal	Epoxy
Fill Material	Epoxy
Temperature Rating (with Nylon Compression Fitting)	65°C / 150°F
Pressure Rating	100psi / 7 Bar
Mounting	3/4" NPT Pipe Plug

Model ER3200
Adjustable Electrical Resistance Probe With Flush Element
 For Direct Mounting Via 1½" NPT Pipe Plug

All dimensions are in inches

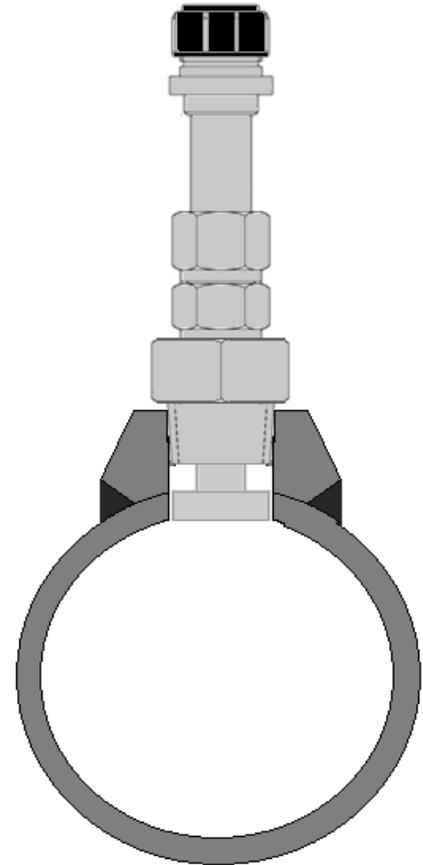

The Model ER3200 is an adjustable-length, electrical resistance probe with a ¾" NPT compression fitting combined with a ¾" to 1½" adapter. The compression fitting allows the probe to be inserted into the process to the required length.

The probe requires process isolation or process shutdown to install and a threaded pipe fitting to mount.

The probe assembly consists of an insertion rod with an element, a hermetically sealed connector welded in place, a ¾" compression fitting, and a ¾" to 1½" adapter. The adapter cannot be removed from the compression fitting.

The insertion length (I.L.) is calculated to the end of the element. Probe length can be specified by the customer. For standard probes, the maximum insertion length is given in the chart on page 2 of this data sheet.

Several standard elements are available to meet your specific needs.

Specifications	
Probe Body	316 Stainless Steel
Element Seal	Epoxy
Fill Material	Epoxy
Temperature Rating	260°C / 500°F
Pressure Rating	1500psi / 102 Bar
Mounting	1½" NPT Fitting

3.10 Model ER4000 Retractable Electrical Resistance Probe With Loop Element For The Low Pressure Retractable System

The Model ER4000 is a retractable, electrical resistance probe commonly used in field and plant applications. A specially designed packing gland is used with the probe for insertion into or retraction from a pressurized system without a process shutdown. Standard packing material in the packing gland is Teflon®. Grafoil packing can be provided if required.

When the probe element requires replacement, the packing gland assembly may be reused. The probe is designed to mount onto a 1" piping system, but can easily be adapted to fit your specific requirements.

The probe assembly consists of a replaceable insertion rod with an element, a hermetically sealed connector welded in place, and a packing gland. A safety chain and safety nut are also provided to prevent blowout. A velocity shield can be added to the assembly if required.

Picture is for illustrative purposes only, flanged connection is also available

Key	
1 – Probe Element	5 – TBE Pipe Nipple (usually fitted with bleed valve)
2 – Thredo-let (flanged connection is available)	6 – Thread adaptor (if required)
3 – TBE Pipe Nipple	7 – Packing gland
4 – Full Bore Ball Valve (flanged connection is available)	8 – Safety chain
	Items 1-6 are supplied separately from the ER4000

The insertion length (I.L.) is calculated to the end of the shield or to the end of the element if a shield is not present. Probe length can be specified by the customer. For standard probes, the maximum insertion length is given in the chart below. Several standard elements are available to meet your specific needs.

Model ER4100

Retractable Electrical Resistance Probe With Cylindrical Element For The Low Pressure Retractable System

Picture is for illustrative purposes only, flanged connection is also available

The Model ER4100 is a retractable, electrical resistance probe commonly used in field and plant applications. The all-welded design allows the probe to be used in harsh environments. A specially designed packing gland is used with the probe for insertion into or retraction from a pressurised system without a process shutdown. Standard packing material in the packing gland is Teflon®, however, grafoil packing can be provided for high temperature applications*.

When the probe element requires replacement, the packing gland assembly may be reused. The probe is designed to mount onto a 1" piping system, but can easily be adapted to fit your specific requirements.

The probe assembly consists of a replaceable insertion rod with an element, a hermetically sealed connector welded in place, and a packing gland. A safety chain and safety nut are also provided to prevent blowout. A velocity shield can be added to the assembly if required.

Key	
1 – Probe Element	5 – TBE Pipe Nipple (usually fitted with bleed valve)
2 – Thredo-let (flanged connection is available)	6 – Thread adaptor (if required)
3 – TBE Pipe Nipple	7 – Packing gland
4 – Full Bore Ball Valve (flanged connection is available)	8 – Safety chain
Items 1-6 are supplied separately from the ER4100	

The insertion length (I.L.) is calculated to the end of the shield or to the end of the element if a shield is not present. Probe length can be specified by the customer. For standard probes, the maximum insertion length is given in the chart below. Several standard elements are available to meet your specific needs.

Model ER4300

Retractable Electrical Resistance Probe With Spiral Loop Element Special Order Probe For The Low Pressure Retractable System

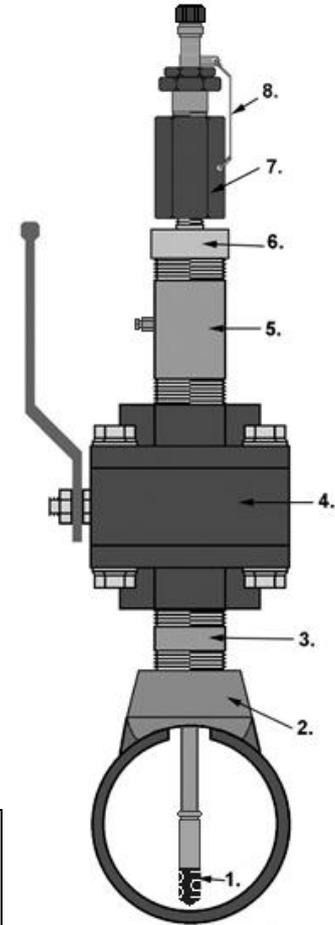

The Model ER4300 is a retractable, electrical resistance probe commonly used in field and plant applications.

The element is a spiral wound strip encased in epoxy. This approach to element construction offers several advantages over other element designs:

- High intrinsic resistance – provides highly stable readings with low susceptibility to noise.
- High element strength – allows use in very high flow rate regimes such as a gas transmission.
- Wide spacing of element loops – minimises the risk of iron sulphide scaling and bridging.

While the spiral loop is ideally suited to fast flowing, sour systems, its high stability makes it a suitable choice for oil and gas systems.

Key	
1 – Probe Element	5 – TBE Pipe Nipple (usually fitted with bleed valve)
2 – Thredo-let (flanged connection is available)	6 – Thread adaptor (if required)
3 – TBE Pipe Nipple	7 – Packing gland
4 – Full Bore Ball Valve (flanged connection is available)	8 – Safety chain
	Items 1-6 are supplied separately from the ER4300

Picture is for illustrative purposes only, flanged connection is also available

A specially designed packing gland is used with the probe for insertion into or retraction from a pressurised system without a process shutdown. Standard packing material in the packing gland is Teflon®, however, grafoil packing can be provided for high temperature applications*.

When the probe element requires replacement, the packing gland assembly may be reused. The probe is designed to mount onto a 1" piping system, but can easily be adapted to fit your specific requirements.

The probe assembly consists of a replaceable insertion rod with an element, a hermetically sealed connector welded in place, and a packing gland. A safety chain and safety nut are also provided to prevent blowout. A velocity shield can be added to the assembly if required.

Note: Not all alloys are available with all element types and seals.

* Chemically equivalent to standard pipe-grade carbon steels.

For alloys, sizes, or other special requirements not listed, please contact our sales department.

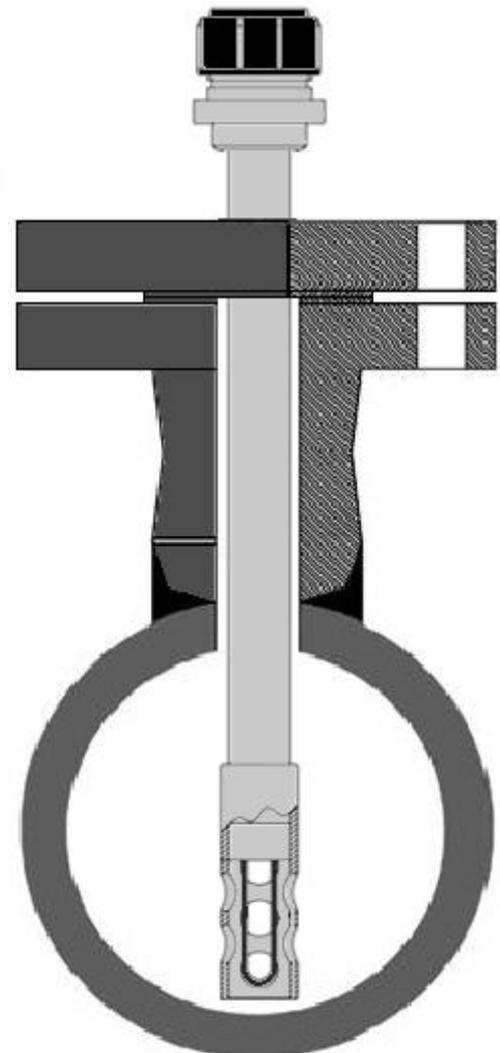

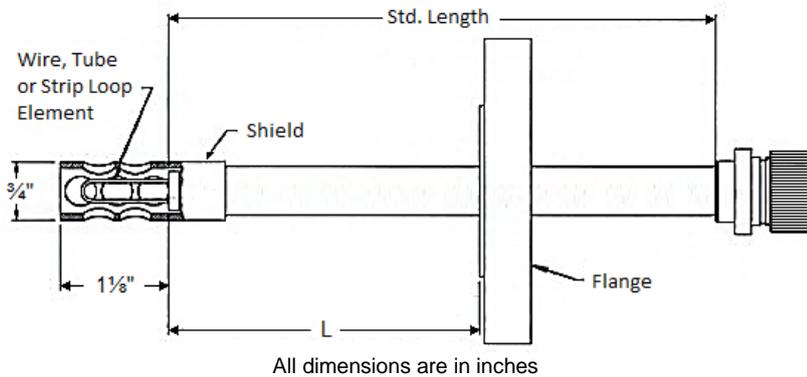

Safety clamps are available separately, these provide additional support to the packing gland and safety chain to control the positioning of the coupons within the pipe.

Model ER6000
Electrical Resistance Probe With Loop Element
 For Direct Mounting Via Flanged Branch

The Model ER6000 is a fixed-insertion-length, flange-mounted, electrical resistance probe. The probe is ideally suited for use in high pressure and/or hazardous applications where threaded fittings are not available or not recommended.

Process shutdown or process isolation is required for installation and inspection.

The probe assembly consists of an insertion rod with an element, a hermetically sealed connector and a flange (as specified by customer), which are all welded in place.

A velocity shield can be added to the assembly if required and a mechanical seal can be added for additional safety.

Several standard elements, lengths and different flange sizes are available to meet your specific needs (please refer to the Element and Alloy Selection Chart for more information.)

Specifications

Model ER6100

Electrical Resistance Probe With Cylindrical Element For Direct Mounting Via Flanged Branch

The **Model ER6100** is a fixed-length, flange-mounted, electrical resistance probe. The probe is ideally suited for use in high pressure and/or hazardous applications where threaded fittings are not available or not recommended.

Process shutdown or process isolation is required for installation and inspection.

The all-welded construction allows the probe to be used in harsh environments. The probe assembly consists of an insertion rod with an element, a hermetically sealed connector, and a flange (as specified by customer), which are all welded in place.

A mechanical seal and a velocity shield can be added if required.

The insertion length (I.L.) is calculated to the end of the shield or to the end of the element if a shield is not present. Probe length can be specified by the customer. For standard probes, the maximum insertion length is given in the chart below and, in this case, is based on a 1" total flange thickness.

Several standard elements, lengths and different flange sizes are available to meet your specific needs (please refer to the Element and Alloy Selection Chart for more information.)

Model ER7000
Retrievable Electrical Resistance Probe With Loop Element
For The High Pressure Two Inch Access Fitting System

Picture is for illustrative purposes only, other access fitting mounting options are available.

The Model ER7000 Electrical Resistance Probe is a fixed-length probe for use with the two inch access fitting systems at high pressures and temperatures.

The probe assembly consists of an insertion rod with an element, a hermetically sealed six pin connector and a pipe plug with the industry standard 1-14 UNS 2A LH thread.

The pipe plug on the probe screws into the hollow plug nut of the access system. This allows the probe to be installed in the process, using a retriever tool and service valve, without process shutdown.

A shield for the element is fitted to the ER7000 probe as standard, various options are available.

Several standard element and probe lengths are available to meet your specific needs. (Refer to the Element and Alloy Selection Chart for more information.)

Probe adaptors are available and must be ordered separately.

The insertion length (I.L.) can range from 2.875" up to any length specified by the customer in 1/8" increments.

Model ER7100

Retrievable Electrical Resistance Probe With Cylindrical Element For The High Pressure Two Inch Access Fitting System

Picture is for illustrative purposes only, other access fitting mounting options are available.

The Model ER7100 Electrical Resistance Probe is a fixed-length, retrievable probe for use with the two inch access fitting system in high pressure and high temperature applications.

The all-welded construction of the element makes it ideal for harsh environments.

A shield for the element can be added to the probe if required.

The probe assembly consists of an insertion rod with an element, a hermetically sealed six pin connector and a pipe plug with the industry standard 1-14 UNS 2A LH thread.

The pipe plug on the probe screws into the hollow plug nut of the access system. This allows the probe to be installed in the process, using a retriever tool and service valve, without process shutdown.

The minimum insertion length (I.L.) for J0 element is 3", 5" for other element types, up to any length specified by the customer in 1/8" increments.

Several standard elements are available to meet your specific needs (please see page 2). Probe adaptors are available and must be ordered separately.

Model ER7220

Retrievable Electrical Resistance Probe With Flush Element Adjustable Length

For The High Pressure Two Inch Access Fitting System

Picture is for illustrative purposes only, other access fitting mounting options are available.

The Model ER7220 is an adjustable-length, flush mount, retrievable, electrical resistance probe for use with the two inch access fitting system in high pressure and high temperature applications.

These probes are ideally suited for applications where the probe element needs to be flush with the wall of the pipe to prevent any obstructions.

The probe assembly consists of an insertion rod with an element, a hermetically sealed six pin connector and a pipe plug with the industry standard 1-14 UNS 2A LH thread.

The pipe plug on the probe screws into the hollow plug nut of the access fitting system. This allows the probe to be installed in the process, using a retriever tool and service valve, without process shutdown.

The adjustable flush element allows for a total adjustment of 1".

The insertion length (I.L.) can range from a minimum of 1.75" up to any length in 1" increments (specify lengths over 1.75" as 2", 3", 4", etc.) specified by the customer.

Several standard elements are available to meet your specific needs. Probe adaptors are available and must be ordered separately.

Specifications	
Probe Body	316 Stainless Steel
Element Seal	Epoxy
Fill Material	Epoxy
O-Ring Material	Viton (Other Materials Are Available)
Temperature Rating	260°C / 500°F
Pressure Rating	3600 PSI / 245 Barg
Mounting	Two Inch Access Fitting System With Hollow Plug

Model ER7230

Retrievable Electrical Resistance Probe With Flush Element For The High Pressure Two Inch Access Fitting System

Picture is for illustrative purposes only, other access fitting mounting options are available.

The Model ER7230 is a fixed-length Flush-Mount, retrievable, electrical resistance probe for use with the two inch access fitting system in high pressure and high temperature applications.

These probes are ideally suited for applications where the probe element needs to be flush with the wall of the pipe.

The ER7230 has been specifically designed to minimize the negative effects of iron sulfide by maximizing the spacing between the sensing element and probe body, thus reducing the possibility of shorting by conductive buildup.

The probe assembly consists of an insertion rod with an element, a hermetically sealed six pin connector and a pipe plug with the industry standard 1-14 UNS 2A LH thread.

The pipe plug on the probe screws into the hollow plug nut of the access system. This allows the probe to be installed in the process, using a retriever tool and service valve, without process shutdown.

The insertion length (I.L.) can range from a minimum of 1.75" up to any length specified by the customer in 1/8" increments.

Several standard elements are available to meet your specific needs. Probe adaptors are available and must be ordered separately.

Model ER7300

Retrievable Electrical Resistance Probe With Spiral Loop Element For The High Pressure Two Inch Access Fitting System

Picture is for illustrative purposes only, other access fitting mounting options are available.

The Model ER7300 spiral loop probe is retrievable, electrical resistance probe designed for use with two inch high pressure access fitting system.

The element is a spiral wound strip encased in epoxy. This approach to element construction offers several advantages over other element geometries:

- High intrinsic resistance – provides highly stable readings with low susceptibility to noise.
- High element strength – allows use in very high flow rate regimes such as a gas transmission.
- Wide spacing of element loops – minimises the risk of iron sulphide scaling and bridging.

While the spiral loop is ideally suited to fast flowing, sour systems, its high stability makes it a suitable choice for oil and gas systems.

The probe assembly consists of an insertion rod with an element, a hermetically sealed six pin connector and a pipe plug with the industry standard 1-14 UNS 2A LH thread.

The pipe plug on the probe screws into the hollow plug nut of the access fitting system. This allows the probe to be installed in the process, using a retriever tool and service valve, without process shutdown.

Insertion length (I.L.) can range from a minimum of 3.75 inch up to any length in 1/8 inch increments.

Several standard elements are available to meet your specific needs. Probe adaptors are available and must be ordered separately.

Model LP1000

Two Electrode Linear Polarisation Resistance Probe

For Direct Mounting Via 1", 1½" or 2" NPT Pipe Plug

2-Electrode Endcap

The Model LP1000 is a Linear Polarisation Resistance Probe commonly used in Laboratory, bypass-loop, and field applications. The assembly consists of an NPT pipe plug (1 inch, or 1.5 inch or 2 inch), a two-electrode endcap and a six-pin military connector mounted in place. Electrodes are ordered separately. Several standard electrodes are available to meet your specific needs.

Specifications	
Probe Body	316 Stainless Steel, Carbon Steel or C276
Endcap Seal	Glass
Fill Material	Epoxy
Temperature Rating	260°C / 500°F

Three Electrode Linear Polarisation Resistance Probe

For Direct Mounting Via 1", 1½" or 2" NPT Pipe Plug

LPR Electrodes

LPR probe electrodes are replaceable and are sold separately.

The LP1100 LPR probe utilises EL412XXX2800000 electrodes. Note that these electrodes vary in length by material, this should be considered when calculating the probe length.

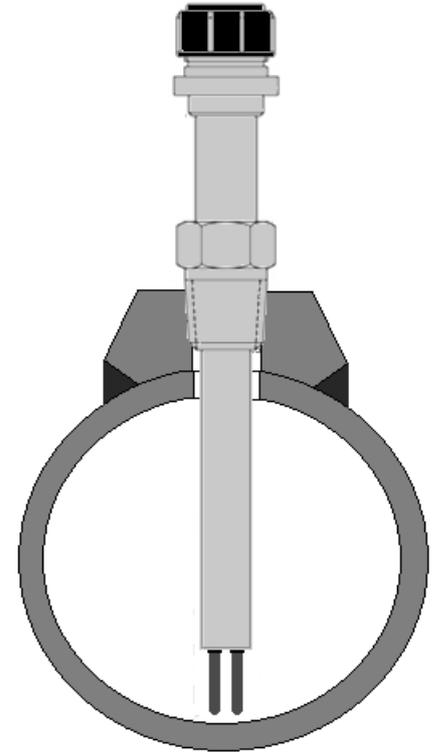

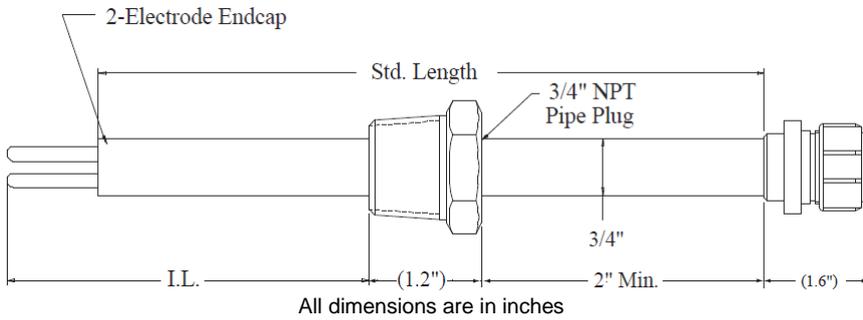

Please see RC SL's product data sheet for LPR electrodes for ordering information.

4.3

Model LP2000

Two Electrode Linear Polarisation Resistance Probe

For Direct Mounting Via 3/4", or 1" NPT Pipe Plug

The Model LP2000 is a fixed-length, linear polarisation resistance probe with a 3/4" or 1" NPT pipe plug. The probe requires process isolation or process shutdown to install and a threaded pipe fitting to mount.

The probe assembly consists of an insertion rod with a two-electrode endcap, a hermetically sealed connector and an NPT pipe plug which are all welded in place.

The insertion length (I.L.) is calculated to the end of the electrode and can be specified by the customer. For standard probes, the maximum insertion length is given in the chart below.

Electrodes are ordered separately. Several standard electrodes are available to meet your specific needs.

Specifications				
Probe Body	316 Stainless Steel or C276		Order Length	I.L. (max)
Endcap Seal	Glass		6"	4.05"
Fill Material	Epoxy		8"	5.05"
Temperature Rating	260°C / 500°F		12"	10.05"
Pressure Rating	3000psi / 204 Bar		18"	16.05"
Mounting	3/4" or 1" NPT Pipe Plug

4.4

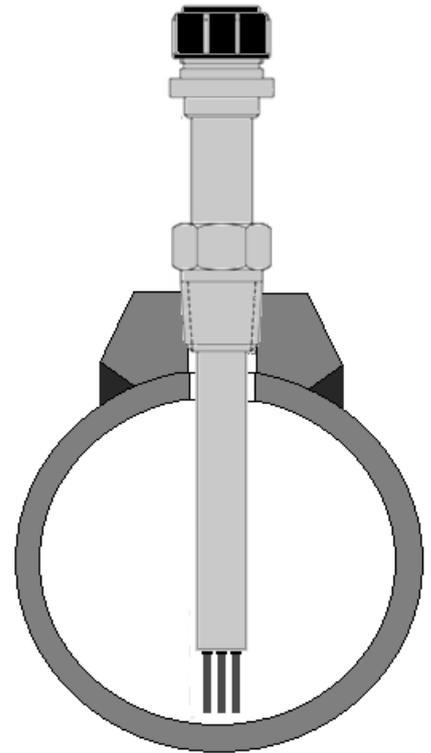

Model LP2100

Three Electrode Linear Polarisation Resistance Probe

For Direct Mounting Via 1" NPT Pipe Plug

All dimensions are in inches

The Model LP2100 is a fixed-length, linear polarisation resistance probe with a 1" NPT pipe plug.

The probe requires process isolation or process shutdown to install and a threaded pipe fitting to mount.

The probe assembly consists of an insertion rod with a three-electrode endcap, a 1" NPT pipe plug and a five-pin military connector mounted in place.

The insertion length (I.L.) is calculated to the end of the electrode and can be specified by the customer. For standard probes, the maximum insertion length is given in the chart below. This maximum I.L. is based on the length of a carbon steel electrode. Electrode lengths may vary depending on the alloy.

Electrodes are ordered separately.

Specifications				
Probe Body	316 Stainless Steel or C276		Order Length	I.L. (max)

4.5

Model LP3000

Adjustable Two Electrode Linear Polarisation Resistance Probe

For Direct Mounting Via 3/4" or 1" NPT Pipe Plug

The Model LP3000 is a linear polarization resistance probe commonly used in laboratory, bypass-loop, and field applications.

The assembly consists of a 3/4" NPT compression fitting, an insertion rod with a hermetically sealed two-electrode endcap, and a six-pin connector welded in place.

The insertion length (I.L.) is calculated to the end of the electrode and can be specified by the customer. For standard probes, the maximum insertion length is given in the chart below.

Electrodes are ordered separately. Several standard electrodes are available to meet your specific needs.

For Direct Mounting Via $\frac{3}{4}$ " or 1" NPT Pipe Plug

LPR Electrodes

LPR probe electrodes are replaceable and are sold separately.

The LP3000 LPR probe utilises EL400XXX2800000 electrodes.

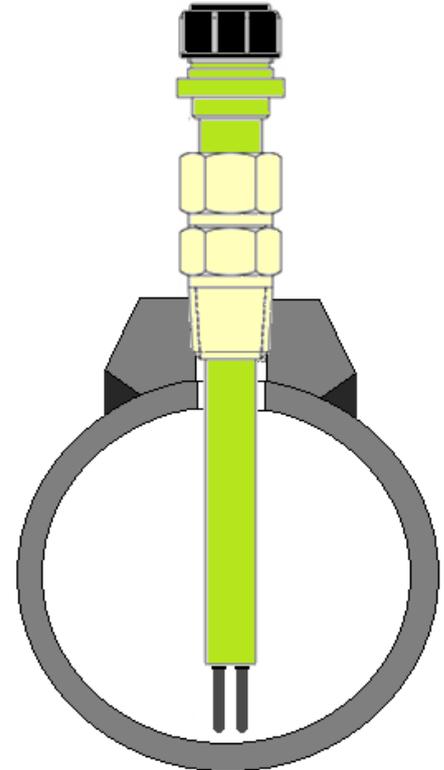

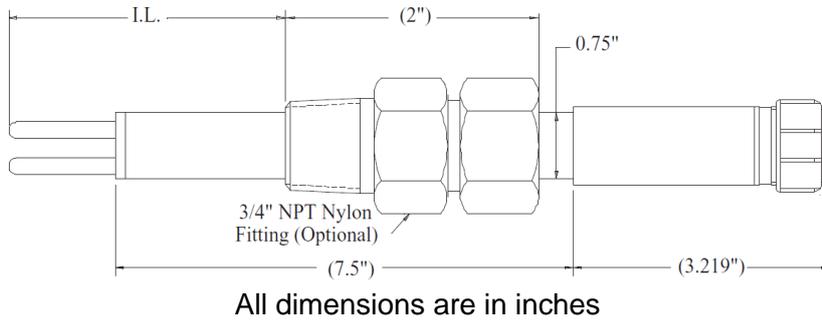

Please see RC SL's product data sheet for LPR electrodes for ordering information.

4.6

Model LP3010

Adjustable Two Electrode Linear Polarisation Resistance Probe

For Direct Mounting Via 3/4" Pipe Plug

The Model LP3010 is a linear polarization resistance probe commonly used in laboratory, bypass-loop, and field applications.

The probe (with additional instrumentation) can be used to monitor corrosion rates, evaluate materials, and screen corrosion inhibitors.

The assembly consists of a glass epoxy probe with an optional 3/4" NPT nylon compression fitting for insertion into the system.

The studs for mounting the electrodes and the six-pin connector are held in place by the epoxy fill material.

The maximum insertion length (I.L.) is 6.75" when the compression fitting is used and 8.75" when the fitting is not used.

Electrodes are ordered separately.

Specifications	
Probe Body	Glass Epoxy
Endcap Seal	Epoxy
Fill Material	Epoxy
Temperature Rating (with Nylon compression fitting) (without Nylon compression fitting)	65°C / 150°F 150°C / 300°F

LPR Electrodes

LPR probe electrodes are replaceable and are sold separately.

The LP3100 LPR probe utilises EL412XXX2800000 electrodes. Note that these electrodes vary in length by material, this should be considered when calculating the probe length.

Please see RCSL's product data sheet for LPR electrodes for ordering information.

4.8

Model LP4000

Retractable Two Electrode Linear Polarisation Resistance Probe For The Low Pressure Retractable System

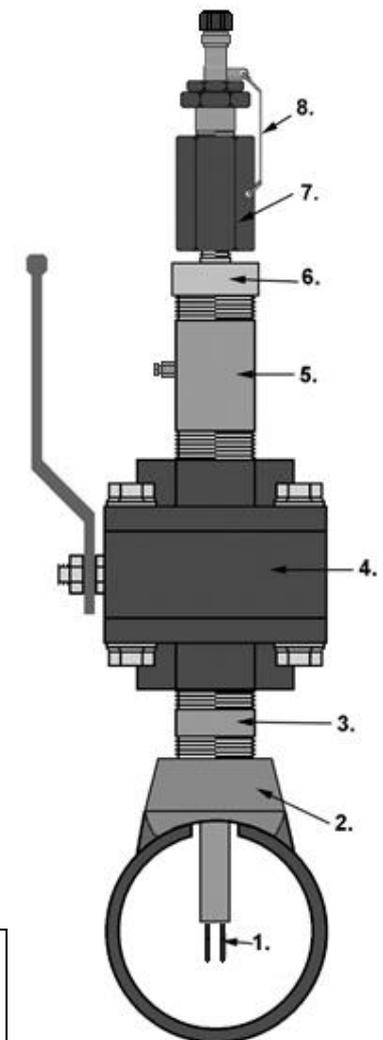

The Model LP4000 is a retractable, linear polarisation resistance probe commonly used in field and plant applications. A specially designed packing gland is used with the probe for insertion into or retraction from a pressurised system without a process shutdown.

The probe is designed to mount easily on a 1" piping system, but it can be modified for your specific mounting requirements.

The probe assembly consists of a packing gland, an insertion rod with a hermetically sealed three-electrode endcap, and a hermetically sealed six-pin connector.

The retractable design allows the probe to be installed into and removed from a pressurised system without a process shutdown and it allows the insertion length (I.L.) to be adjusted by the installer.

Picture is for illustrative purposes only, flanged connection is also available

Key	
1 – Probe Electrodes	5 – TBE Pipe Nipple (usually fitted with bleed valve)
2 – Thredo-let (flanged connection is available)	6 – Thread adaptor (if required)
3 – TBE Pipe Nipple	7 – Packing gland
4 – Full Bore Ball Valve (flanged connection is available)	8 – Safety chain
	Items 1-6 are supplied separately from the LP4000

The packing system features a built-in mechanical stop to secure the rod in place during service. The system also utilises an adjustable safety chain system which serves as an additional mechanical stop and eliminates the need for cumbersome safety frames in most cases.

A variety of probe lengths are available to meet your specific needs (see Ordering Information). Electrodes are available in a wide variety of alloys and are sold separately (see Optional Accessories).

Specifications			
Probe Body Material	316 Stainless Steel or C276*	Order Length	I.L. (max)
End Cap Seal	Glass	24"	17.53"
Fill Material	Epoxy	30"	23.53"
Packing Material	Teflon® (standard) or Grafoil	36"	29.53"
Temperature Rating	260°C / 500°F Teflon®	42"	35.53"
Pressure Rating	2000 PSI / 138 Barg**		
Mounting	Minimum 1" Full Bore Valve		

* Other material options are available

** Easy Tool (Product Code: SR2159-ERXX) is recommended for insertion or retraction in systems with pressure over 150 psi

Model LP4300

Retractable Three Electrode Linear Polarisation Resistance Probe For The Low Pressure Retractable System

Picture is for illustrative purposes only, flanged connection is also available

The Model LP4300 is a retractable, linear polarisation resistance probe specifically designed for use with CorrTran and SmartCET style instruments.

The probe is designed to mount easily on a 1" piping system, but it can be modified for your specific mounting requirements.

The probe assembly consists of a packing gland, an insertion rod with a hermetically sealed three-electrode endcap, and a hermetically sealed six-pin connector.

The retractable design allows the probe to be installed into and removed from a pressurised system without a process shutdown and it allows the insertion length (I.L.) to be adjusted by the installer.

Model LP6000

Two Electrode Linear Polarisation Resistance Probe

For Direct Mounting Via Flanged Branch

All dimensions are in inches

The Model LP6000 is a fixed-length, flange-mounted, linear polarisation resistance probe. The probe is ideally suited for use in high pressure and/or hazardous applications where threaded fittings are not available or not recommended.

Process shutdown or process isolation is required for installation and inspection.

The probe assembly consists of an insertion rod with a two-electrode endcap, a hermetically sealed connector, and a flange (as specified by customer), which are all welded in place.

Insertion length (I.L.) is calculated to the end of the electrodes and, in this case, is based on a 1" total flange thickness. Customers can specify any length required. For standard probes, the maximum insertion length is given in the chart below.

Electrodes are ordered separately. Several standard electrodes are available to meet your specific needs.

Specifications				
Probe Body	316 Stainless Steel or C276		Order Length	I.L. (max)
Endcap Seal	Glass		12"	10.12"
Fill Material	Epoxy		18"	16.12"

Model LP7000

Retrievable Two Electrode Linear Polarisation Resistance Probe For The High Pressure Two Inch Access Fitting System

Picture is for illustrative purposes only, other access fitting mounting options are available

The Model LP7000 is a fixed-length, linear polarisation resistance probe for use with the two inch access fitting system at high pressure and high temperature.

The probe assembly consists of an insertion rod with a hermetically sealed two-electrode endcap with 2x 4-40 UNC mounting studs, a hermetically sealed six pin connector and a pipe plug with the industry standard 1-14 UNS 2A LH thread.

The pipe plug on the probe screws into the hollow plug nut of the access system. This allows the probe to be installed in the process, using a retriever tool and service valve, without process shutdown.

The insertion length (I.L.) can range from 3" up to any length specified by the customer in 1/8" increments, note that this includes 1.25" for the length of the electrode.

Several standard electrodes are available to meet your specific needs. Probe adaptors are also available and must be ordered separately.

Specifications	
Probe Body	316 Stainless Steel or C276

The LP7000 probe requires Electrode Product Code: EL400XXX2800000.

Please see RCSL's product data sheet for LPR electrodes for ordering information.

4.14

Model LP7100

Retrievable Three Electrode Linear Polarisation Resistance Probe For The High Pressure Two Inch Access Fitting System

Picture is for illustrative purposes only, other access fitting mounting options are available

The Model LP7100 is a fixed-length, linear polarisation resistance probe for use with the two inch access fitting system at high pressure and high temperature.

The probe assembly consists of an insertion rod with a hermetically sealed three-electrode endcap with threaded mounting studs (5-40 and 4-40 UNC threads are available), a hermetically sealed six pin connector and a pipe plug with the industry standard 1-14 UNS 2A LH thread.

The pipe plug on the probe screws into the hollow plug nut of the access system. This allows the probe to be installed in the process, using a retriever tool and service valve, without process shutdown.

Several standard electrodes are available to meet your specific needs. Probe adaptors are also available and must be ordered separately.

The insertion length (I.L.) can range from 2 inch up to any length specified by the customer in 1/8 inch increments

Please ensure that the 4-40 UNC thread option and EL525 electrodes are selected when ordering this probe for use with CorrTran instruments.

Specifications

LPR Electrodes

LPR probe electrodes are replaceable and are sold separately.

The LP7100 probe with 5-40 UNC thread requires Electrode Product Code: EL412XXX2800000. Note that these electrodes vary in length by material, this should be considered when calculating the probe length.

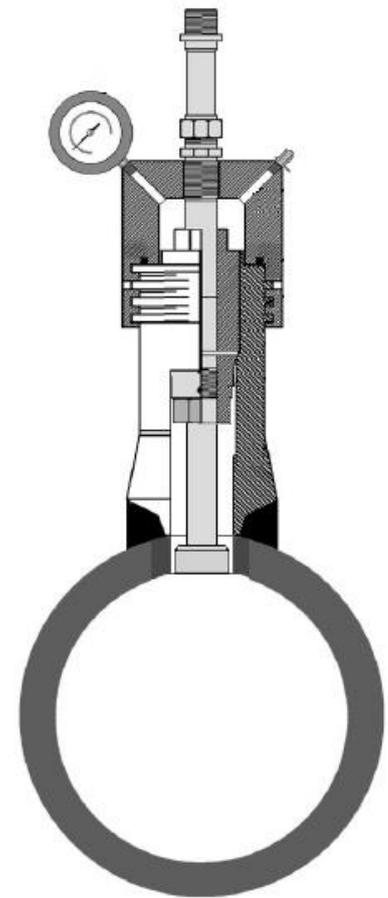

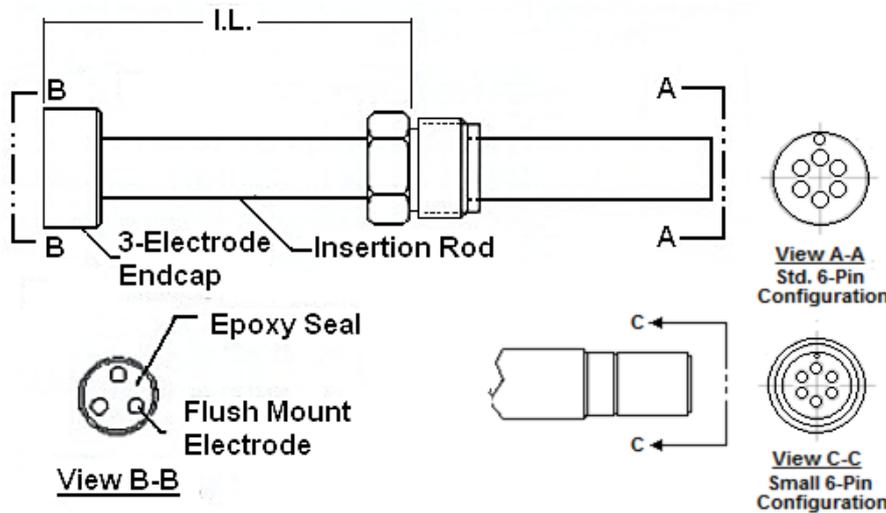

When using the LP7100 probe with CorrTran instrument, please ensure that the probe is ordered with 4-40 UNC threaded mounting studs. Electrode Product Code: EL525XXX28000XX is required.

Please see RCSL's product data sheet for LPR electrodes for ordering information.

4.15

Model LP7210

Retrievable Three Flush Electrode Linear Polarisation Resistance Probe For The High Pressure Two Inch Access Fitting System

Picture is for illustrative purposes only, other access fitting mounting options are available.

The Model LP7210 is a fixed-length, flush-mount, three electrode, retrievable, linear polarisation resistance probe for use with the two inch access fitting system at high pressure and high temperature.

These probes are ideally suited for applications where the probe electrodes need to be flush with the wall of the pipe.

The probe assembly consists of an insertion rod, a flush mount, three-electrode endcap, a hermetically sealed six pin connector and a pipe plug with the industry standard 1-14 UNS 2A LH thread.

The pipe plug on the probe screws into the hollow plug nut of the access system. This allows the probe to be installed in the process, using a retriever tool and service valve, without process shutdown.

The probe's three-electrode endcap is filled with an epoxy seal.

The Electrodes are not replaceable. The insertion length (I.L.) can range from a minimum of 1.75 inches up to any length specified by the customer in $\frac{1}{8}$ inch increments.

Electrodes For Linear Polarisation Resistance Probes

The electrodes in Linear Polarisation Resistance (LPR) probes are consumable components. Most LPR probes have replaceable electrodes for this reason.

This data sheet covers the electrodes for standard 2 electrode, 3 electrode and “CorrTran” type LPR probes. Other types of electrode are available, please contact our sales department with your requirement.

The minimum Order Quantity for Electrodes is 10pcs. This may increase for non-standard materials.

LPR Electrodes are available in almost any alloy to suit your application. For alloys, sizes, or other special requirements not listed, please contact our sales department.

5.1 Model MS0500 Corrosion Meter For Electrical Resistance Probes

The MS0500 is a battery-powered, portable corrosion meter capable of interpreting all electrical resistance type corrosion probes. Combining a light weight of only 4 pounds with ease of operation, the MS0500 enables the operator to take readings from several different probe locations.

Corrosion rate measurements are made using the electrical resistance method. Essentially, the instrument measures the resistance of the probe element which changes over time as metal loss occurs. The rate of change is directly proportional to the corrosion rate. This method finds a wide variety of applications since it can be used in conductive and nonconductive environments, such as petroleum, chemical, water, soil, or even atmosphere.

Probe shown in photograph not included with corrosion meter

The MS0500 has a permanently attached cable assembly which mates directly to any standard ER probe. A switch is provided on the front panel of the instrument for selecting the probe type to be measured (wire loop, tube loop, cylindrical, etc.). Readings are taken using the dial and analog meter on the front panel.

The MS0500 also offers a built-in battery test function, and comes in a convenient carrying case.

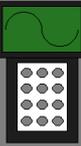

Model MS0500 Technical Specifications	
MS0500 – ER Corrosion Meter (Ordering # IN0500)	
Physical Data	
Instrument Weight:	1.08 kg (2.38 lb)
Total Weight w/ Carrying Case & Accessories:	1.63 kg (3.6 lb)
Instrument Dimensions:	7.62cm H x 12.7cm W x 17.15cm D (3" H x 5" W x 6.75")
Carrying Case Dimensions:	15.24cm H x 15.24cm W x 22.23cm D (6.0" x 6.0" x 8.75")
Operating Temperature:	0° to 50°C (32° to 122°F)
Storage Temperature:	0° to 50°C (32° to 122°F)
Performance Data	
Measurement Type:	ER measurement using any standard ER probe type (wire loop, tube loop, cylindrical, flush, strip, etc.) w/ check reading.
Range:	0-1000 digits representing 0-100% of probe life
Resolution:	1 digit
Electrical Data	
Power Requirements:	Two 9V Batteries
Maximum Probe Cable Distance:	30.48m (100ft). This may vary with element type

Special Features
- Simple user interface
- Built-in battery check
- Portable

Accessory Items
Carrying Case, 6" Probe Cable (attached), Meter Prover, Operation Manual

5.2

Models MS2600E & MS2601E High Resolution Transmitter For Electrical Resistance Probes 4-20mA Analog Output

The Model MS2600E & MS2601E ER Transmitters measure all types of electrical resistance (ER) corrosion probes.

The new high-resolution, 16-bit measurement provides faster response, obtaining corrosion rates in hours instead of days. The transmitter can be remote or direct-mounted (shown below).

The MS2600E transmitter is available in a weather-proof stainless steel enclosure designed for applications which do not permit aluminium enclosures (such as offshore environments or Zone 0 hazardous areas).

Alternatively the MS2601E has a weather-proof (NEMA-4X) and explosion proof cast aluminum enclosure.

The MS2600E & MS2601E are completely loop-powered, so installation is simple.

A two-wire connection is all that is required for both instrument power and data transmission. Setup is also simple, using a set of switches to select the probe type to be measured.

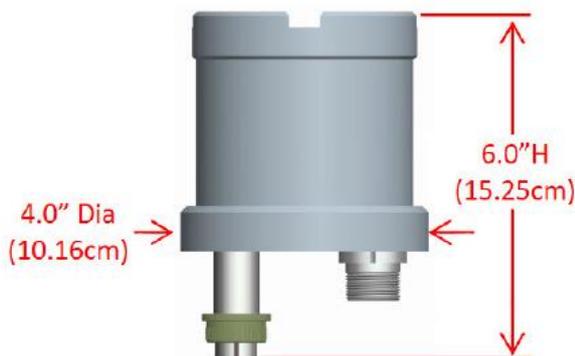

MS2600E direct mounted to a retrievable probe

MS2600E

Models MS2600E & MS2601E

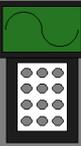

High Resolution Transmitter For Electrical Resistance Probes 4-20mA Analog Output

Models MS2600E & MS2601E Technical Specifications	
MS2600E & MS2601E – High Resolution ER, Transmitter, 4-20mA	
Mounting Specifications:	Direct probe mount (standard) May be pole mounted using optional hardware (Up to a 6.35cm (2.5") Diameter pole)
Physical Data MS2600E	
Instrument Weight:	1.68Kg (3.7 lb.)
Total Weight w/ Accessories:	2.61Kg (5.76lb.)
Instrument Dimensions	15.25cm Height x 10.16cm Diameter (6.0" Height x 4" Diameter)
Enclosure:	316 Stainless Steel, IP66
Physical Data MS2601E	
Instrument Weight:	1.68Kg (3.7 lb.)
Total Weight w/ Accessories:	2.61Kg (5.76lb.)
Instrument Dimensions:	20.32cm H x 12.24cm W x 8.76cm D (8.0" Height x 4.82" W x 3.45" D)
Enclosure:	Copper Free Cast Aluminium Explosion Proof (FM, CSA, CENELEC, UL) IP 66, NEMA 4X, 7BCD, 9EFG
Performance Data	
Measurement Type:	ER measurement using any standard ER probe type (Wire Loop, Tube Loop, Cylindrical, Flush, Strip, etc.)
Operating Temperature:	-20°C to 70°C (-4°F 158°F)
Storage Temperature:	-40°C to 80°C (-40°F to 176°F)
Range:	0-100% of probe life
Resolution:	0.0015% of probe life
Cycle Time:	1 Minute
Electrical Data	
Power Requirements:	10 to 28 VDC
Maximum Probe Cable Distance:	30ft (9.1m)
Output Specifications:	4-20mA Current Loop Output
Hazardous Location Certifications – Intrinsic Safety	
USA/ Canada	Conforms to ANSI/UL Std. 60079-0, 60079-11, 61010-1 CAN/CSA Std. E66079-0, E60079-11 & CAN/CSA C22.2 No. 61010-1 Class I, Zone0, AEx ia IIC T4 Ga Zone 20, AEx ia IIIC T130° C Da -20° C ≤ Ta ≤ +70° C

Included Accessories	
Meter Prover, Operations Manual	
MS2600E also has 10 metre Current Loop Harness	
Optional Accessories	
Probe Extension Cable, Remote Mounting Hardware	
M20x1.5 cable entry adaptor (for MS2601E only, for output signal cable only)	

5.3

Models MS2700E & MS2701E High Resolution Transmitter For Electrical Resistance Probes RS485 Modbus Output

The Model MS2700E and MS2701E ER Transmitters measure all types of electrical resistance (ER) corrosion probes.

The new high-resolution, 16-bit measurement provides faster response, obtaining corrosion rates in hours instead of days. The transmitter can be remote or direct-mounted (shown).

The MS2700E transmitter is available in a weather-proof (IP66) stainless steel enclosure designed for applications which do not permit aluminum enclosures (such as offshore environments or Zone 0 hazardous areas).

Alternatively the MS2701E has a weather-proof (IP66) and explosion proof cast aluminum enclosure.

The MS2700E & MS2701E transmitters offer simple installation and robust RS-485 Modbus communication, allowing up to 32 units to be connected in series (daisy-chained) on a single line. Setup is also simple, using a set of switches to select the probe type to be measured, address, and other options.

5.5 Models MS3500E, MS3510E & MS3520E Remote Data-Loggers For Electrical Resistance Probes

The Model MS3500E, MS3510E and MS3520E are battery-powered, intrinsically safe, remote data-loggers capable of measuring and storing data from all types of electrical resistance (ER) corrosion probes.

The instrument is microprocessor-based and features a simple, menu-driven interface.

Corrosion rate measurements are made using a high-resolution electrical resistance method, measuring up to 65535 probe units. Essentially, the instrument measures the resistance of the probe element which changes over time, as metal loss occurs. The rate of change is directly proportional to corrosion rate.

This method finds a wide variety of applications since it can be used in conductive and nonconductive environments such as petroleum, chemical, water, soil, or even atmosphere.

The instrument takes probe readings on a user-programmable logging interval. Readings are time and date stamped as they are taken, then stored to memory.

Between readings, the instrument remains in a “sleep” mode to conserve main battery power. The instrument’s memory is capable of storing more than 100,000 readings, and is stored in non-volatile Flash memory.

Stored data can be uploaded to any PC as a comma-delimited ASCII text file. Because the data is in ASCII text format, it can be imported into any standard data analysis program such as Microsoft Excel. Data can also be reviewed on the instrument’s LCD display for quick reference.

Stored data can be downloaded directly to a certified USB storage device or via Bluetooth (option on Model MS3520E). This eliminates the need to remove the instrument from its site, or to bring a laptop PC to the site. This can be particularly useful when collecting data from multiple MS3500E, MS3510E and / or MS3520E Data Loggers. And since the instrument is intrinsically safe, data can be downloaded from the instrument even in hazardous locations.

The MS3510E also offers an optional 4-20mA current loop output. This feature allows data from the instrument to be fed directly to any industrial process computer that accepts analogue inputs.

The instrument is housed in a stainless steel NEMA 4X / IP 66 enclosure, and all external connections are weather-proof. This makes the instrument suitable for use in almost any indoor or outdoor environment.

Physical Data	
Instrument Weight:	5.42 Kg (11.94 lb.)
Total Weight w/ Accessories:	6.19 Kg (13.64 lb.)
Instrument Dimensions:	29.21cm H x 22.71cm W x 10.16cm D (11.50" x 8.94" x 4")* *Dimensions do not include Bluetooth aerial on MS3520E
Case Specifications:	NEMA-4X / IP66 Stainless Steel
Mounting Specifications:	27.31cm H x 15.24cm W (10.75" x 6") Bolt Pattern 0.76cm (0.3") Diameter Bolt Holes
Operating Temperature:	-40° to +70°C (-40° to +158°F)
Storage Temperature:	-40° to +70°C (-40° to +158°F)
Performance Data:	
Measurement Type:	ER measurement using any standard ER probe type (wire loop, tube loop, cylindrical, flush, strip, etc.)
Range:	0-65535 Probe Life Units (Displayed as 0.00 to 1000.00)
Resolution:	0.0015% of probe life
Download Method:	Directly to certified USB storage device Via Bluetooth (MS3520E)
Data Storage:	> 100,000 readings
Electrical Data:	
Power Requirements:	7.2 V lithium battery pack
Typical Battery Life:	3 years at 1 hour measurement interval
Output MS3500E:	Download to USB flash drive
Output MS3510E:	USB & 4-20mA Current Loop Output
Output MS3520E:	USB & Bluetooth Class v2.0 / 10 meter range
Output Specifications:	RS-232 Output in Comma-Delimited ASCII Text Format
Hazardous Location Certifications:	
Intrinsic Safety Ex ia[ia] IIC T4 Ga:	-40 Deg C < Ta < 70 Deg C (with Tadian TL5930 cells) -40 Deg C < Ta < 50 Deg C (with Xeno XL-205F cells)
Special Features:	
<ul style="list-style-type: none"> • Microprocessor-based electronics • Large internal memory for more storage • Data battery backup • Menu-driven interface • Low-battery detection • IP66 enclosure 	
Included Accessory Items (All Models):	
10ft Probe Cable, Meter Prover, Operation Manual, Corrosion Data Management Software.	
Included Accessory Items (MS3510E):	
Communications Cable and Connector	
Optional Accessories:	
Product Code: ET1650 - Certified USB Flash Drive	
Bluetooth transfer unit	

5.6

Models MS3600E, MS3610E & MS3620E Field-Mounted High-Resolution Data Loggers For Electrical Resistance Probes

The Model MS3600E, MS3610E and MS3620E are battery-powered, intrinsically safe, field-mounted data loggers capable of automatically measuring and storing data from all types of electrical resistance (ER) corrosion probes.

The instrument is microprocessor-based and features an intuitive menu-driven interface. Additionally, the instrument is designed to mount directly to the ER probe which simplifies installation.

Corrosion rate measurements are made using a high-resolution electrical resistance method, measuring up to 65535 probe units.

Essentially, the instrument measures the resistance of the probe element which changes over time, as metal loss occurs. The rate of change is directly proportional to corrosion rate.

This method finds a wide variety of applications since it can be used in conductive and nonconductive environments such as petroleum, chemical, water, soil, or even atmosphere.

The instrument takes probe readings on a user-programmable logging interval. Readings are time and date stamped as they are taken, then stored to memory. Between readings, the instrument remains in a “sleep” mode to conserve main battery power. The instrument’s memory is capable of storing more than 100,000 readings, and is stored in non-volatile Flash memory.

Stored data can be uploaded to any PC as a comma-delimited ASCII text file. Because the data is in ASCII text format, it can be imported into any standard data analysis program such as Microsoft Excel. Data can also be reviewed on the instrument’s LCD display for quick reference.

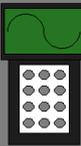

Stored data can be downloaded directly to a certified USB storage device or via Bluetooth (option on Model MS3620E). This eliminates the need to remove the instrument from its site, or to bring a laptop PC to the site. This can be particularly useful when collecting data from multiple MS3600E/MS3620E Data Loggers. And since the instrument is intrinsically safe, data can be downloaded from the instrument even in hazardous locations.

The MS3610E also offers an optional 4-20mA current loop output. This feature allows data from the instrument to be fed directly to any industrial process computer that accepts analog inputs.

The instrument is housed in a stainless steel NEMA 4X / IP 66 enclosure, and all external connections are weather-proof. This makes the instrument suitable for use in almost any indoor or outdoor environment.

Optional Accessories		
Product Code: ET1650 - Certified USB Flash Drive		
Product Code: ET1867 - Certified USB Barrier		

5.8 ET1650 – Certified USB Flash Drive

The ET1650 Certified USB flash drive is a data transfer unit (DTU) which is certified for use in hazardous locations when used in conjunction with MS35XX, MS36XX, MS4500E, MS4500E-HC, and MS50XX data-loggers.

The certified DTU allows the user to collect data from the listed data loggers without having to remove the product from the classified area.

The DTU incorporates non-volatile flash memory and has sufficient memory to store millions of readings.

It can be connected to any standard PC using the industry standard USB Type-A connector. The certified DTU must be connected and used in accordance with the control drawing for the appropriate instrument.

Specifications:

Storage Capacity: 8 GB

Operating Temperature: -40° C to 70° C

Storage Temperature: -40° C to 85° C

Humidity: 10-90% RH, non-condensing

Housing: ABS Polycarbonate

USB Class: 1.1 or 2.0

USB Type: Type A

Operating System: Windows 7, Windows 8, Windows 10

Protection Class: II 1 (1) G Ex ia[ia]IIC T4 Ga

Certificate: ITS18ATEX203161X
IECEX ETL 18.0007X

Connection Parameters

U _o max	≤ 6.0
I _o max	≤ 747.5mA
P _o max	≤ 923.1mW
C _o	12.71μF
L _o	0.37μH

5.9 ET1867 – Certified USB Barrier

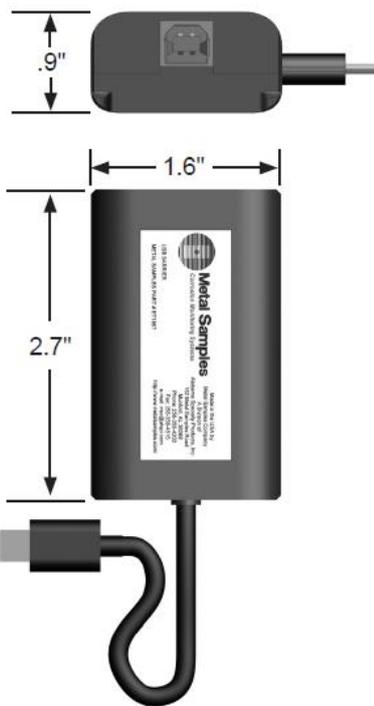

The ET1867 is a certified USB barrier which allows portable, certified instruments models MS4500E and MS4500E-HC to be connected directly to a PC via the USB port.

The barrier protects the certified instrument from potential damage caused by excessive energy that could enter through the PC's USB port.

This barrier is required to connect the MS4500E or MS4500E-HC directly to a PC. The USB barrier connects to the instruments using a standard USB mini-B connector and connects to a PC using a standard USB-A to USB-B (printer) cable.

The certified USB barrier must be connected and used in accordance with the control drawing for the MS4500E or MS4500E-HC instrument..

Specifications:

Operating Temperature: -40° C to 70° C

Storage Temperature: -40° C to 85° C

Humidity: 10-90% RH, non-condensing

Housing: ABS Polycarbonate

USB Class: 1.1 or 2.0

USB Type: Type B (To PC Interface) USB Mini-B (To Instrument)

Protection Class: II 1 (1) G Ex ia[ia] IIC T4 Ga

Certified to use with Metal Samples MS4500E and MS4500E-HC Instruments at Non-Hazardous locations

Certificate: ITS18ATEX203161X
IECEX ETL 18.0007X

Connection Parameters

$U_o \text{ max}$	≤ 6.0
-------------------	------------

5.10 Model MS1000 Portable Corrosion Meter For Linear Polarisation Resistance Probes

The MS1000 is a hand-held, battery-powered corrosion meter. This versatile instrument measures the instantaneous corrosion rate and electrochemical current between the electrodes of any standard 2-electrode linear polarization resistance (LPR) probe.

Corrosion rate measurements are made using the linear polarization resistance technique. The instrument measures the current required to polarize the electrodes of a probe to a known potential. From the polarization potential and the measured current, polarization resistance can be calculated.

Then, using Faraday's law, instantaneous corrosion rate is calculated from polarization resistance.

The MS1000 is designed to calculate the corrosion rate in mils per year (mpy) for carbon steel. Multiplication factors for several common alloys have been included on the front panel of the instrument for quick reference. Multiplication factors for other alloys can be easily calculated using the formulas supplied in the operation manual.

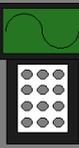

The MS1000 also offers a high precision zero resistance ammeter (ZRA) for measuring the electrochemical current between electrodes. This function may be used to measure the galvanic current between electrodes of dissimilar alloys.

The MS1000 has a simple function key interface, using a 4-key keypad and a 4-line LCD display. The instrument also offers low-battery detection and an auto-shutoff feature to conserve battery life.

5.11 Model MS1500L Portable Corrosion Meter For Linear Polarisation Resistance Probes

The Model MS1500L is a hand-held, battery-powered, intrinsically safe corrosion meter capable of measuring and storing data from all types of 2- or 3-electrode linear polarization resistance (LPR) corrosion probes.

The instrument is light weight, microprocessor-based, and features a simple, menu-driven interface using a 12-key keypad and a 4-line LCD display.

Corrosion rate measurements are made using the linear polarization resistance technique. The instrument measures the current required to polarize the electrodes of a probe to a known potential.

From the polarization potential and the measured current, polarization resistance can be calculated.

Then, using Faraday's law, the instantaneous corrosion rate can be calculated from polarization resistance.

Probe shown in photo not included with corrosion meter

The MS1500L incorporates a high-precision zero-resistance ammeter (ZRA) for measuring galvanic current between electrodes. It also offers a high-precision voltmeter for measuring the open-circuit potential between electrodes.

After performing a measurement, the instrument displays the corrosion rate, current, or potential, depending on the mode selected. The reading can then be stored to memory or discarded.

All stored readings are automatically time and date stamped, and are protected by a lithium back-up battery. The instrument can store a maximum of 3,000 readings on up to 100 different probes.

Stored data can be uploaded to a PC as a comma-delimited ASCII text file. Because the data is in ASCII text format, it can be imported into any standard data analysis program such as Microsoft Excel. Data can also be reviewed on the instrument's LCD display for quick reference.

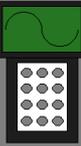

The MS1500L may also be used as a data transfer unit (DTU) for the MS3500L Remote Data Logger. Data may be transferred from multiple MS3500L field-based units to the MS1500L, then later transferred to a PC for analysis.

5.12 Model MS2001L Remote Continuous Corrosion Meter For Linear Polarisation Resistance Probes

The MS2001L is a microprocessor-based, field-mountable corrosion rate meter.

This versatile instrument measures the instantaneous corrosion rate and electrochemical current between the electrodes of any standard 2-electrode linear polarization resistance (LPR) probe.

Corrosion rate is displayed on the LCD display.

Corrosion rate measurements are made using the linear polarization resistance technique.

The instrument measures the current required to polarize the electrodes of a probe to a known potential.

From the polarization potential and the measured current, polarization resistance can be calculated. Then, using Faraday's law, instantaneous corrosion rate is calculated from polarization resistance.

Alloy multipliers for mild steel, copper, brass, and lead are incorporated into the instrument. The multiplier is selected using a switch on the front panel of the instrument.

The MS2001L also offers a high precision zero resistance ammeter (ZRA) for measuring the electrochemical current between electrodes. This function may be used to measure the galvanic current between electrodes of dissimilar alloys.

The instrument is housed in a NEMA-4X enclosure, making the MS2001L suitable for use in almost any indoor or outdoor environment.

Models MS2100L & MS2150L - CorrTran AQUA 4-20mA/HART® Transmitters For Linear Polarisation Resistance Probes

Models MS2100L and MS2150L CorrTran AQUA are compact corrosion transmitters used in the water treatment industry that measure general corrosion, localised corrosion (pitting), and conductance, and transmits that information to operators via 4 to 20mA / HART® protocol in real time. The corrosion rate or pitting factor is configured as the primary variable using a standard 2-wire 4 to 20 mA output. The remaining outputs are configured as secondary and tertiary HART variables.

The CorrTran AQUA utilises state-of-the-art algorithms and data analysis techniques to accurately measure general corrosion rate and pitting. Harmonic distortion analysis (HDA) is applied to improve the performance of the industry-accepted linear polarisation resistance (LPR) technique used to measure corrosion rate.

Probe shown in photo not included with transmitter

To further enhance the performance, an application specific Stern-Geary variable (B value) is calculated and updated every measuring cycle. There is no need to manually update the B value because of process changes.

During the measurement cycle, the CorrTran AQUA also performs an automated electrochemical noise (ECN) measurement, which in combination with the corrosion rate data can provide a measurement of localised corrosion (pitting).

The CorrTran AQUA works with Metal Samples three electrode CorrTran style probes and electrodes. Probes are available in a variety of mounting types and materials to suit almost any type of installation.

Features

- On-line corrosion monitoring, multivariable
- Install in an existing coupon rack
- 2-wire, 4 to 20 mA transmitter, HART interface
- General corrosion, localized corrosion (pitting), and conductance monitoring via HART
- Stern-Geary B value automatically updated for changes in the process
- Optional local LCD (MS2150L)
- Optional cable gland entry

5.15 Models MS3500L & MS3510L Remote Data-Logger For Linear Polarisation Resistance Probes

Models MS3500L & MS3510L are battery powered, intrinsically safe, remote data-loggers capable of measuring and storing data from all types of linear polarization resistance (LPR) corrosion probes.

The instrument is microprocessor-based and features a simple, menu-driven interface using a 2-key keypad and a 2-line LCD display.

Corrosion rate measurements are made using the linear polarization resistance technique. The instrument measures the current required to polarize the electrodes of a probe to a known potential.

From the polarization potential and the measured current, polarization resistance can be calculated. Then, using Faraday's law, the instantaneous corrosion rate can be calculated from polarization resistance.

The MS3500L Remote Data Logger is designed to provide a continuous record of corrosion activity in remote locations that are infrequently visited, such as cross country pipelines and unmanned production platforms. However, this unit finds equal application in locations that are inconvenient or difficult to access on a regular basis.

The MS3500L incorporates a high-precision zero-resistance ammeter (ZRA) for measuring galvanic current between electrodes. It also offers a high-precision voltmeter for measuring the open-circuit potential between electrodes.

The MS3500L takes probe readings on a user-programmable logging interval. Readings are time and date stamped as they are taken, then stored to memory. Between readings, the instrument remains in a "sleep" mode to conserve main battery power. The instrument's memory is capable of storing 3,000 readings, and is protected by a lithium back-up battery.

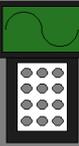

Stored data can be uploaded to a PC as a comma-delimited ASCII text file. Because the data is in ASCII text format, it can be imported into any standard data analysis program such as Microsoft Excel. Data can also be reviewed on the instrument's LCD display for quick reference.

Stored data can also be downloaded to a Metal Samples Model MS1500L Hand Held LPR Data Logger for transfer to a PC. This handy feature eliminates the need to remove the MS3500L from its site, or to bring a laptop PC to the site. This can be particularly useful when collecting data from multiple MS3500L Data Loggers. And since both the MS3500L and the MS1500L are intrinsically safe, data can be uploaded from the MS3500L to the MS1500L even in hazardous locations.

The MS3500L also offers an optional 4-20mA current loop output (model MS3510L). This feature allows data from the instrument to be fed directly to any industrial process computer that accepts analogue inputs.

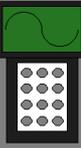

The instrument is housed in a stainless steel NEMA 4X enclosure, and all external connections are weather-proof. This makes the MS3500L suitable for use in almost any indoor or outdoor environment.

MS3500L – Remote LPR Data Logger (Ordering # IN3500L)			
MS3510L – Remote LPR Data Logger with 4-20mA Current Loop Output (Ordering # IN3510L)			
Physical Data:			
Instrument Weight:	5.42 Kg (11.94 lb.)		
Total Weight w/ Accessories:	6.19 Kg (13.64 lb.)		
Instrument Dimensions:	29.21cm H x 22.71cm W x 10.16cm D (11.5" x 8.94" x 4")		
Case Specifications:	NEMA-4X / IP66 Stainless Steel		
Mounting Specifications:	27.31cm H x 15.24cm W (10.75" x 6") Bolt Pattern 0.76 cm (0.3") Diameter Bolt Holes		
Operating Temperature:	0° to 50°C (32° to 122°F)		
Storage Temperature:	-20° to 70°C (-4° to 158°F)		
Performance Data:			
Measurement Type	Range	Resolution	Cycle Time
2-Electrode	0-200 mpy	0.01 mpy	1 minute to 99 hours
3-Electrode	0 to 150 mpy	0.01 mpy	1 minute to 99 hours
Galvanic	± 999 µA	1µA	1 minute to 99 hours
Potential	± 999 µA	1 mV	1 minute to 99 hours
Electrical Data:			
Power Requirements:	Six 1.5V AA Batteries		
Maximum Probe Cable Distance:	3.05m (10 ft.)		
Output Specifications:	RS-232 Output in Comma-Delimited ASCII Text Format		
Intrinsic Safety	 Class I, Division 1 Groups A, B, C and D Temperature Code T3 Class I, Zone 0 Group IIC, T3C Conforms to ANSI/UL Std. 913		
Special Features:			
- Microprocessor-based electronics			
- Data storage capacity of 3,000 readings, with battery backup			
- Menu-driven interface using a 2-key keypad and a 2-line LCD display			
- Low-battery detection			
Included Accessory Items (All Models):			
10ft Probe Cable, Meter Prover, 6 to 5-Pin Adapter, Galvanic Adapter, Communications Cable and Connector, Operation Manual, Corrosion Data Management Software.			
Included Accessory Items (MS3510L):			
Current Loop Connector			
Optional Accessories:			
MS1500L portable data-logger and data-transfer device			

5.16 Model MS6200L Bench Top Data-Logger For Linear Polarisation Resistance Probes

The MS6200L is a bench-top data logger capable of measuring and storing data from all types of linear polarization resistance (LPR) corrosion probes.

The instrument is microprocessor-based and features a simple, menu-driven interface using a 2-key keypad and a 2-line LCD display.

It is housed in a rugged but lightweight plastic enclosure and is ideally suited for use in laboratory environments. The adjustable handle can be used for carrying the unit, or can be used as a tilt stand to adjust the viewing angle.

Corrosion rate measurements are made using the linear polarization resistance technique. The instrument measures the current required to polarize the electrodes of a probe to a known potential. From the polarization potential and the measured current, polarization resistance can be calculated. Then, using Faraday's law, the instantaneous corrosion rate can be calculated from polarization resistance.

The MS6200L incorporates a high-precision zero-resistance ammeter (ZRA) for measuring galvanic current between electrodes. It also offers a high-precision voltmeter for measuring the open-circuit potential between electrodes.

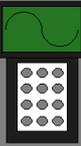

The MS6200L takes probe readings on a user-programmable logging interval. Readings are time and date stamped as they are taken, then stored to memory. Between readings, the instrument remains in a "sleep" mode to conserve energy. The instrument's memory is capable of storing 3,000 readings, and is protected by a lithium back-up battery. Stored readings can be downloaded to a computer via USB or serial port for further analysis using the provided software. The software provides a simple and intuitive interface for downloading, viewing, and graphing the data.

5.17 Model MS2540 Data Receiver / Repeater

The MS2540 Receiver is designed to be used with ER and LPR current loop transmitters to provide a single-channel corrosion monitoring system.

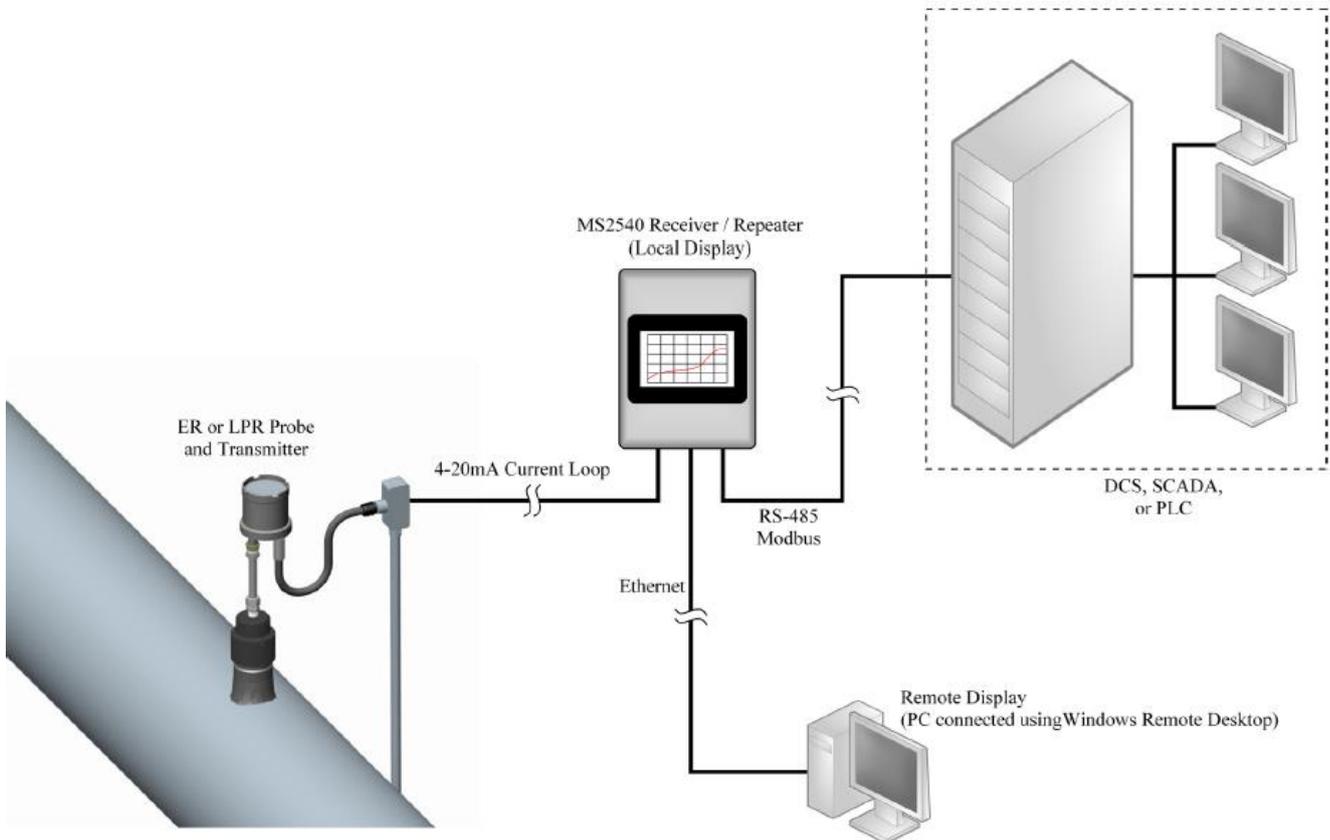

The MS2540 provides a local display of the probe and transmitter data. Additionally the MS2540 can repeat the information to a plant control room via RS-485 Modbus.

The MS2540 utilizes a color touch screen to display information and present user controls. The unit is powered by 100-240 VAC, and provides the 24 VDC supply for powering the transmitter's 4-20 mA loop.

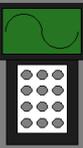

The receiver processes the 4-20 mA signal to provide a digital readout of the cumulative metal loss and the probe corrosion rate based on the monitoring period set by the user (48 hours, 7 days, 15 days or 30 days).

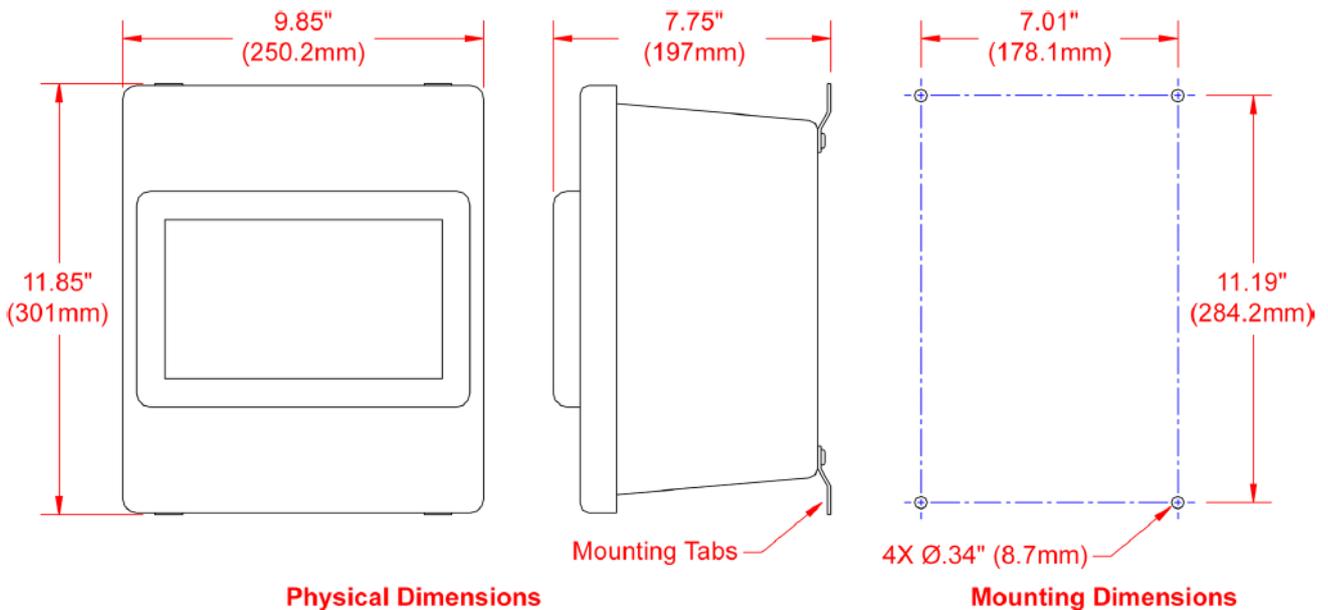

The MS2540 also offers an integrated web server. This feature allows users to access the MS2540 from any PC on the network using a standard web browser. Through this interface users can view data and make setup changes to the MS2540.

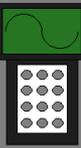

5.17
Model MS2540
Data Receiver / Repeater

Model MS2540 Technical Specifications	
MS2540 – Data Receiver / Repeater	
Receiver and Transmitter:	
Input:	4-20mA current loop from one ER or LPR corrosion transmitter
Current Loop Source Voltage:	24 VDC
Input Impedance:	250 Ohms
Maximum transmitter to receiver distance:	3048 metres (10,000 feet)
Output:	
Outputs:	RS-485 Modbus, Ethernet
Display:	
Type:	Color touch screen
Displayed Values	Metal Loss (mils or mm) or Corrosion Rate (mpy or mm/y)
Resolution	+/- 0.1 mpy or 0.01 mil
Power Supply:	
Supply Voltage:	100 to 240 VAC, 1 phase, 50/60 Hz
Current:	< 2 Amps
Physical Data:	
Operating Temperature:	0° to 50°C (32° to 122°F)
Weight:	1.9 Kg (4.0 lbs.)
Mounting Type:	Panel Mount
Included Accessory Items:	
Power cord, mounting tabs	

5.18 Probe Adaptors For The Two Inch Retrievable System

Retrievable Electrical Resistance Probes and Linear Polarisation Resistance Probes are held in place by the hollow plug assembly.

The probe's instrument connection point is situated within the hollow plug, as per the illustration. This is too low for standard cables to reach, therefore a probe adaptor is required for connection of an instrument.

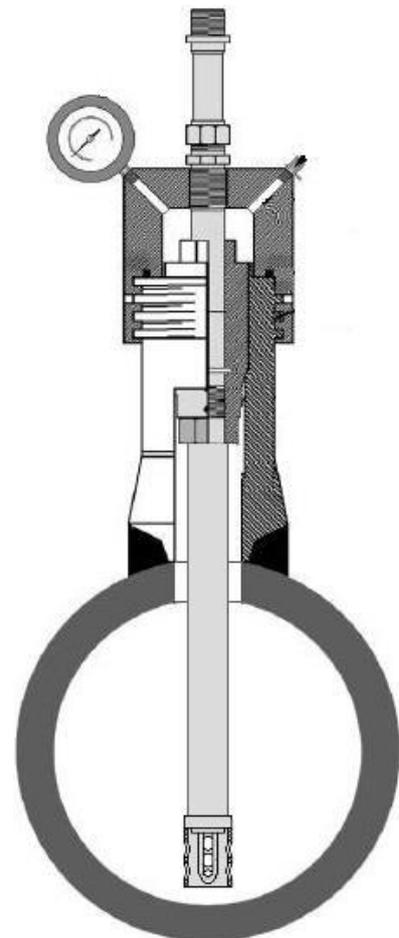

For permanently installed instruments and / or for use with pressure retaining covers a fixed probe adaptor should be used, this has an adjustable $\frac{1}{2}$ " NPT fitting for attachment to the plug / cover as applicable.

It is recommended that the fixed probe adaptor has the blow-out preventer, this is fitted as standard to the 700640 probe adaptor (please see illustrations below). This will prevent the probe adaptor rod from leaving the fitting in the event of it being exposed to pressure.

A portable probe adaptor is generally used with portable instruments, it has no fitting and is only used when taking measurements, it is not permanently installed.

The adaptor has a 316 S/S body. Exotic alloys are not required, the adaptor is isolated from the process.

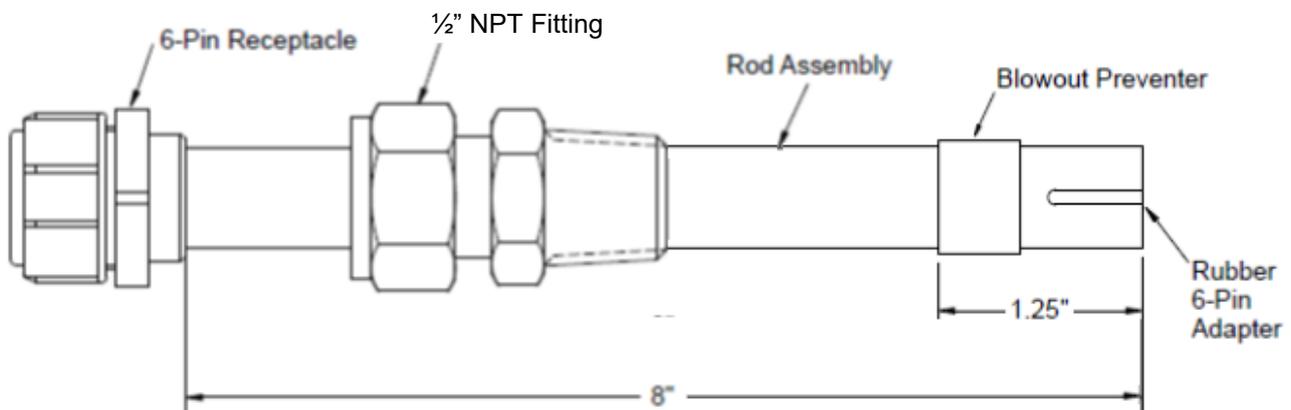

The receptacle is for the connection to instrument, it has male pins and has a dust shield secured by a ball chain. The rubber adaptor has female sockets for connection to the probe.

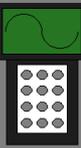

Product Code: 700640 Fixed Probe adaptor is shown, fitted through pressure retaining cover

Product Code: 700640 "6-Pin Fixed Probe Adaptor, Standard Connector"

6-Pin Male to 6-Pin Female Adaptor With Adjustable $\frac{1}{2}$ " NPT Fitting, Blow-Out Preventer and Standard Connector. For use with permanently installed instruments and / or with pressure retaining covers.

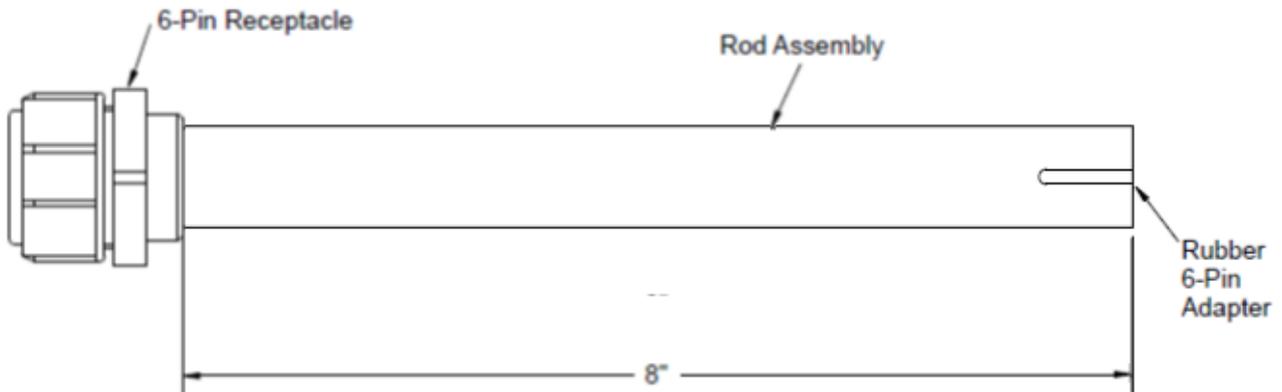

5.18 Probe Adaptors For The Two Inch Retrievable System

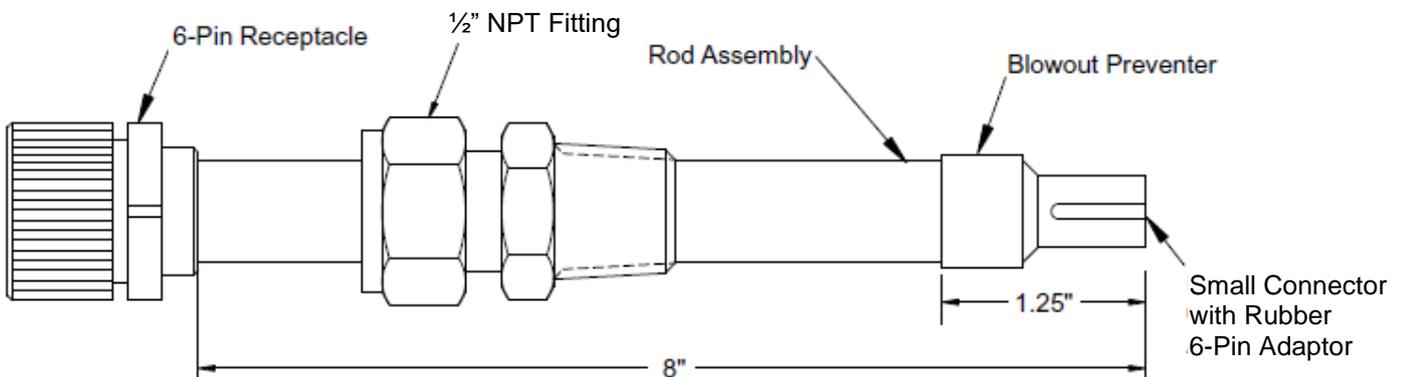

Product Code: 700319 “6-Pin Portable Probe Adaptor”

6-Pin Male to 6-Pin Female Adaptor with Standard Connector. For use with portable instruments.

Product Code: HA7001 01 158 “6-Pin Fixed Probe Adaptor, Small Connector”

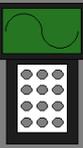

6-Pin Male to 6-Pin Female Adaptor with Adjustable 1/2" NPT Fitting, Blow-Out Preventer and Small Connector. For use with permanently installed instruments and / or with pressure retaining covers.

5.19 Instrument & Probe Extension Cables

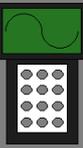

It is recommended that the instrument connection point is located as close as possible to the probe location, however there are many situations where that is not practical. Therefore extension cables are available.

The extension cables are manufactured from high quality cable, with Amphenol type military connectors to provide a weather tight seal.

Two types of cable are available, 5 pin or 6 pin connectors.

6.0 Chemical Injection & Sampling

Sub-Section No.

- 6.1 Two Inch System Injection and Sampling System

- 6.2 Model IP4000 Retractable Injection System

- 6.3 Fixed Quills, Flanged or Threaded

6.1 Retrievable Injection & Sampling

For The High Pressure Two Inch Access Fitting System

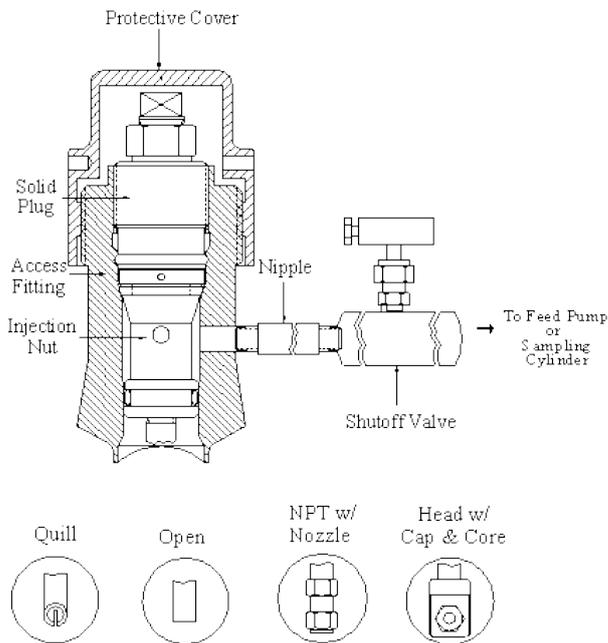

Figure 1

Picture is for illustrative purposes only, various options are available

INJECTION & SAMPLING

Injection and sampling systems are fundamental to corrosion control and process control programs. They are applicable to a large variety of processes in the petroleum, chemical and water treatment industries. Injection systems may be used for the injection into the system of a wide range of chemicals such as biocides, demulsifiers, corrosion inhibitors, oxygen scavenger, glycol and mono-ethylene glycol, dewaxers, methanol, odourisers and a wide range of product activities.

Injection systems may be as simple as using an open-ended tube that allows for even distribution of the injected chemical or as complex as using a head with a cap and core to obtain precise atomisation of the chemical.

Sampling systems, as the name implies are used to take samples of the process fluid medium. Such samples are analysed in the laboratory for inhibitor concentration levels, the presence of metal ions, oxygen levels, scale forming compounds and a wide range of process parameters.

The art of chemical injection is a complex technology. Irrespective of the type of injection or injected fluid, several factors relative to the process system and the injection system must be considered. Principle factors are:

PRESSURE DIFFERENTIAL

This is the difference between the injection pump pressure and the process line or vessel pressure. Ideally the pressure differential should be 8 bar (100psi.) However, varied injection rates can be achieved by changing the pressure differential.

TEMPERATURE

Temperature directly affects viscosity. Ideally the temperature of both the injected chemical and the line product should be about 21°C (70°F.)

VISCOSITY

This is the measure of fluid's resistance to flow. The more viscous the fluid the smaller the spray angle.

SPRAY ANGLE

Spray angle is affected by viscosity, spray distance and pressure differential.

SPRAY COVERAGE

This is calculated theoretical area coverage.

SPECIFIC GRAVITY

The specific gravity of a liquid is the density ratio of the liquid to water. The flow rate of a liquid is affected by its specific gravity.

6.1 Retrievable Injection & Sampling

For The High Pressure Two Inch Access Fitting System

INJECTION RATE

This is the amount of chemical to be injected within a specified period and is defined as litres per day (LPD) gallons per hour (GPH) etc. Injection systems are available for injection rates varying from 0.38 litres/hour (0.1 GPH) to 250 litres/hour (65.7GPH).

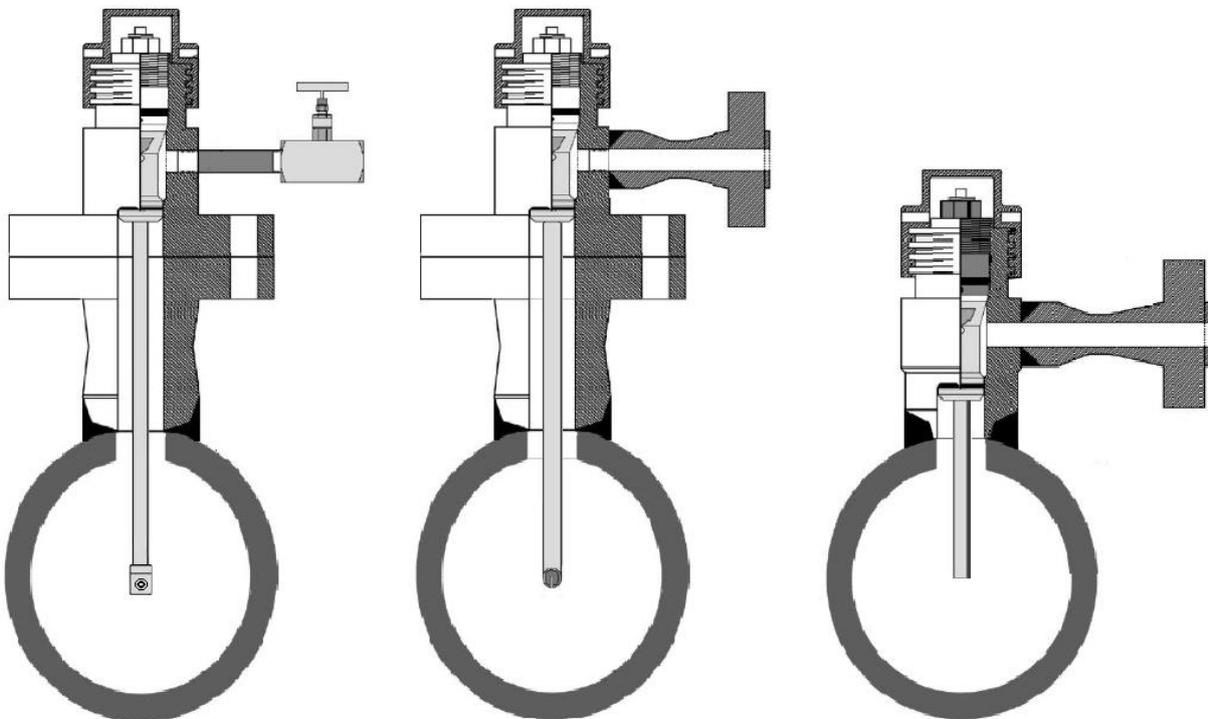

Injection may be via a simple open-ended tube or a quill that relies upon a natural turbulence within the pipeline to disperse the injected chemical and to accomplish even distribution. There is no restricting orifice and such systems tend to be clog proof even when using unscreened chemicals. A disadvantage of such systems is that at low flow rates there tends to be an accumulation of the injected chemical at the pipe wall surface below the injection point.

INJECTION POINT

The maximum fluid velocity is usually at the centre of the line hence the most effective position for injection is generally at the centre of the pipe in the direction of the product flow. If the line is to be pigged, the injection point may be flush with the pipe wall. This eliminates the need to remove the injection probe before pigging operations begin. On pipelines this means that injection is perpendicular to the product flow. Top of the line may be used if the injection is required to be oblique or horizontal to the product flow.

A more comprehensive discussion of the factors to be considered in the design of chemical injection systems is contained in the RCSL injection primer.

Examples of two inch access fitting system injection and sampling assemblies are shown below. A sampling system uses the same components as the injection system, but the tube is usually straight cut rather than scarf (angled) cut.

Flanged Access Fitting with NPT Tee, Nipple, Shut Off Valve & X Head Injection Tube.

Flanged Access Fitting With Welded Flanged Tee & X Quill Injection Tube

Flare-weld Access Fitting With Welded Flanged Tee & X Open Sampling Tube

6.1

Retrievable Injection & Sampling

For The High Pressure Two Inch Access Fitting System

The various components of the assembly are:

1. **AN ACCESS FITTING BODY** – with a side tee through which the fluid transfer takes place.
2. **Access FITTING TEE** – the tee may be threaded or welded. Welded tees are either flanged or butt-weld nipple. Threaded tees are based on an NPT tapped hole in the fitting body (please see 6 & 7). The tee size is rated according to the injection rate and injection and viscosity of the injection chemical.
3. **A SOLID PLUG ASSEMBLY** – this is inside the fitting body and is used to carry an injection nut which has the injection tube/nozzle assembly screwed to its base.
4. **AN INJECTION/SAMPLING NUT** – this is a multiple use nut that replaces the nut of the solid plug. It is used to direct the injected product to the injection tube or atomisation device. An injection nut sizing chart is shown in table 1.
5. **THE INJECTION OR SAMPLING TUBE OR NOZZLE** – The various forms offered are:
 - a. **X OPEN**. This is an open tube. The natural turbulence within the pipeline is used to ensure even distribution. The pressure differential is experienced at the orifices so it is necessary to control the injection rate at the injection pump or the shut off valve.
 - b. **X QUILL**. This has a scarf and quill inserted at the open end. It utilises the turbulence created by its unique design to achieve distribution of the injected chemical into the product flow. Injection tube x quill are clog proof and give extremely good dispersion of the inhibitor provided that the product flow is 4.6 metres per second or greater. As with the open tube, injection rate must be controlled at the injection pump or shut off valve.
 - c. **X NPT**. Again similar to the open tube but is threaded at the dispersion end, thus allowing attachment of female nozzle assemblies. Injection may be perpendicular with the use of a straight nozzle or parallel with a right angle nozzle.
 - d. **X HEAD**. This is the usual style used for parallel injection at the centre of the line. The head is integral with the injection tube and is designed to accept the cap and core from a standard nozzle assembly.
6. **NIPPLES**. Nipples are used with threaded tee access fitting bodies and are the means of connecting the shut off valve to the access fitting body.
7. **SHUT OFF VALVES**. These are required to cut-off the injection flow and maintain pressure integrity through the tee when the solid plug assembly is being removed or replaced. They are also used to control the injection flow rate. A nipple and shut off valve sizing chart is given in Table 3.
8. **CHECK VALVE**. This is an optional item, various designs are available for installation between the injection tube and the injection nut, or in the inlet line to the access fitting body tee.
9. **ATOMISATION NOZZLES AND CAP AND CORES**. These are the various devices which, attached to the dispersion end of the injection tube, permit atomisation of the fluid as it is injected into the product line or vessel.

Nozzle assemblies are complete units which contain caps, cores, and strainers. They are available with both female and male NPT threads to match the thread on the injection tube x NPT. Caps, cores and strainers are component parts of the nozzle assemblies. They have male UNF threads which engage with the UNF threads in the dispersion body of the injection tube x head. The correct nozzle size may be determined from Table 4.
10. **THE INJECTION OR FEED PUMP**. The injection pump must be capable of generating sufficient injection line pressure to overcome the line operating pressure and thus create the required pressure differential across the atomising nozzle or injection tube.

6.1

Retrievable Injection & Sampling

For The High Pressure Two Inch Access Fitting System

MATERIALS OF CONSTRUCTION

As standard the injection nut, quill, nipple and shut off valve are manufactured from 316 stainless steel.

As standard the injection nut seals are 1x Viton O-ring with 2x PTFE back up rings.

These materials comply with the requirements of NACE Standard MR 01-75. Recommended materials for sulphide stress cracking environments.

Other materials are available, please see the injection nut and quill product code generation charts in the how to order section.

HOW TO ORDER

- A) The access fitting body style and tee size may be determined from the access fitting product literature.
- B) The injection / sampling nut size and Product Code may be determined from Table 1.

6.2 Model IP4000 Retractable Injection & Sampling For The Low Pressure Retractable System

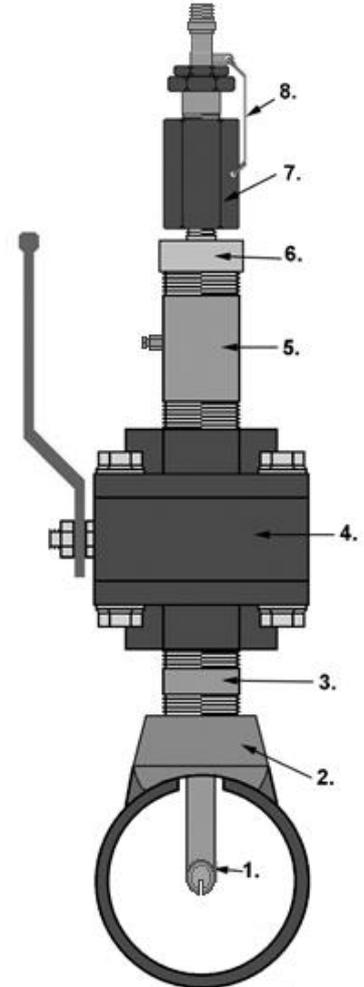

All dimensions are in inches

The Model IP4000 Injection and Sampling System is a retractable unit commonly used in field and plant applications. A specially designed packing gland is used with the unit for insertion into or retraction from a pressurised system without a process shutdown. The unit is designed to mount onto a 1 inch piping system, but can easily be adapted to fit your specific requirements.

The unit assembly consists of a packing gland and an insertion rod with an injection/ sampling fitting. The fitting, which is threaded or welded to the end of the rod, can be either a quill, open, cap and core or nozzle assembly type. A safety cable is also provided to prevent blowout.

In systems with pressure over 150psi, an adaptor for the Easy Tool may be added to the unit.

Picture is for illustrative purposes only, flanged connection is also available

Key	
1 – Injection Quill	5 – TBE Pipe Nipple (usually fitted with bleed valve)
2 – Thredo-let (flanged connection is available)	6 – Thread adaptor (if required)
3 – TBE Pipe Nipple	7 – Packing gland
4 – Full Bore Ball Valve (flanged connection is available)	8 – Safety chain
Items 1-6 are supplied separately from the IP4000	

Standard packing material in the packing gland is Teflon® however, Grafoil® packing can be provided for high temperature applications. Model IP4000 units are available in different lengths and materials.

Specifications			
Body Material	316 Stainless Steel*	Order Length	I.L. (max)
Packing Material	Teflon® (standard) or Grafoil	24"	16"
Temperature Rating	260°C / 500°F Teflon®	30"	22"
Temperature Rating	454°C / 850°F Teflon®	36"	28"
Pressure Rating	2000 PSI / 138 Barg**	42"	34"
Mounting	Minimum 1" Full Bore Valve		

* Other material options are available

** Easy Tool (Product Code: SR2159-ERXX) is recommended for insertion or retraction in systems with pressure over 150 psi

Note: For alloys, sizes, or other special requirements not listed, please contact our sales department.

Safety Clamp

Safety clamps are available separately, these provide additional support to the packing gland and safety chain to control the positioning of the coupons within the pipe.

Safety Clamp Assembly Product Codes:	
PS5463141XX	Replace XX with Length, e.g. PS546314124
PR5637158	Easy Tool / Safety Clamp Adaptor

The safety clamp length must be increased if the IP4000 is configured with the 90° connection for use with the easy tool (please see the drawing on page 1). Please contact RCSL for further information.

6.3

Fixed Quills For Chemical Injection & Sampling

For Direct Mounting Via Flanged Branch or Pipe Plug

Fixed quills are heavy duty products, suitable for chemical injection and sampling applications where regular removal is not required.

Various designs and materials of construction are available to suit customer's requirement, examples of which are shown in this data sheet. Please contact RCSL's Sales Department to discuss your specific requirement.

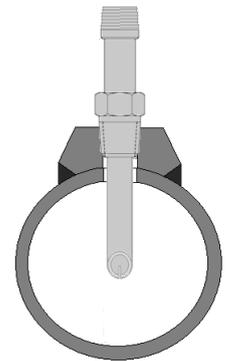

Fixed Threaded Quill

This design is for connection via a threaded pipe plug welded to the quill.

Example shown also has NPT threaded connection for injection / sampling and a slotted scarf cut injection quill.

Other quill options include 90° injection head with atomising / fogging nozzle, plain cut and threaded.

Various designs, sizes and materials are available to meet your requirement.

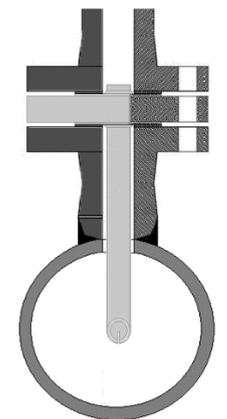

Fixed Flange Quill, Single Flange

This design is for connection between flanged branch and injection connection flange of the same size.

Example shown also has a slotted scarf cut injection quill.

Other quill options include 90° injection head with atomising / fogging nozzle, plain cut and threaded.

Various designs, sizes and materials are available to meet your requirement.

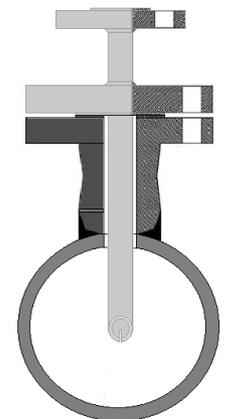

Fixed Reducing Flange Quill

This design is for connection between flanged branch and a smaller injection connection flange, or alternatively the injection connection can be supplied threaded.

Example shown also has a slotted scarf cut injection quill.

Other quill options include 90° injection head with atomising / fogging nozzle, plain cut and threaded.

Various designs, sizes and materials are available to meet your requirement.

7.0 Specialist Probes

Sub-Section No.

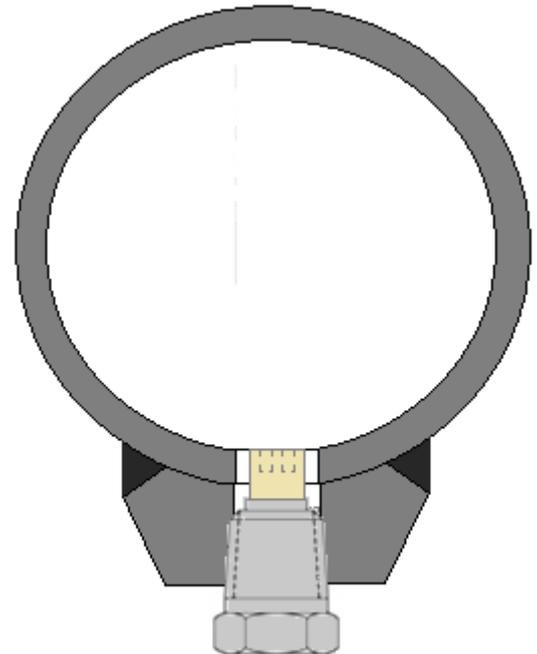

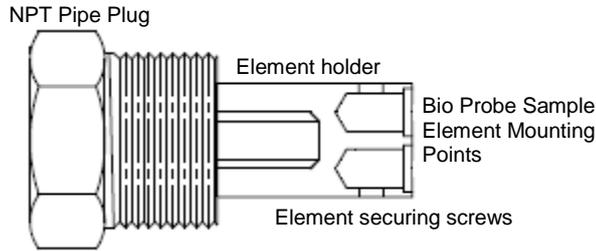

- 7.1 Model FC6100 Direct Mounted Bio Probe

- 7.4 Model SP7000 Retrievable Sand Probe

7.1
Model FC6100
Bio Probe Sample Element Holder
 For Direct Mounting Via Pipe Plug

The Model FC6100 is a fixed-length, thredolet-mounted, Bio Probe Element insertion system, to hold 2 Bio Probe Elements.

Process shutdown or process isolation is required for installation and inspection. The probe assembly consists of an insertion rod with male NPT pipe plug (the body), with a non-metallic holder for the elements.

Insertion length (I.L.) is calculated to the end of the element holder in this case. Customers can specify any length required.

Rose Corrosion will need to know the required length from the base of the pipe plug to the end of the element holder.

Materials of construction can be specified by customer. Standard body material is 316/316L S/S, the element holder is available in Nylon or Delrin as standard.

The Bio Probe Elements are supplied separately, material can be specified by client.

7.2

Model HC6200

Retrieval Bio Probe Sample Element Holder

For The High Pressure Two Inch Access Fitting System

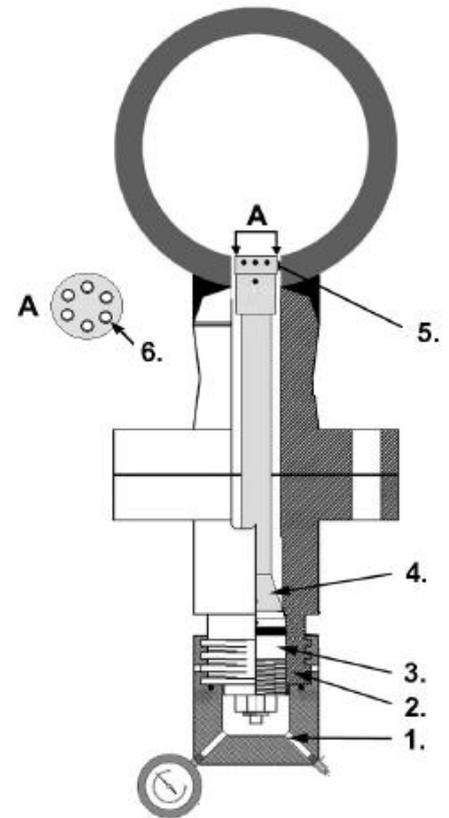

Model HC6200 bio probe is used in the Triseal 2inch Mechanical Access Fitting System to collect samples of bacteria in gas and oil systems.

The bacterial population on a systems metal surfaces more relevant to corrosion than the bacteria population in the system's fluids. This is because only surface or sessile bacteria cause corrosion. Thus a corrosion control program is ineffective unless it kills those bacteria which have formed attached biomasses.

The same bacteria which cause problems in gas pipelines, tanks, vessels, oil wells and water handling systems attach to the bio probe's sample element.

Since the bio probe is designed for high pressure access systems, common throughout the oil field, it becomes a convenient and economical way for sampling corrosion-causing biological activity.

#	Description
1.	Access Fitting Cover
2.	Access Fitting
3.	Solid Plug
4.	Bio Probe Body
5.	Sample Element Holder (non-metallic)
6.	Biological Sample Elements

Drawing is for illustrative purposes only, various access fitting options are available.

The standard material for the biological sample elements is 1018 CS. The purpose of the sample element is only to provide an area for the bacteria to settle and colonise. The sample element is single use, therefore the use of alternative materials such as pipe grade or corrosion resistant alloy is not necessary.

The ideal installation position is bottom of the line entry (per the drawing above), with the sample studs flush to the line or slightly recessed. This will allow the bacteria to settle on the sample elements.

7.3

Model HY7000 / HY7001 Hydrogen Probes

For Direct Mounting or For Use With The Two Inch Access Fitting System

The Model HY7000 and HY7001 are high pressure hydrogen probe configurations which can be used for pressures up to 3600 psi.

Hydrogen probes are commonly used for monitoring hydrogen permeation in steels, which could lead to embrittlement, blistering, and decarburisation resulting in the failure of the material.

The intrusive hydrogen probe assembly consists of three subassemblies, which are sold separately:

- The gauge assembly,
- The hollow plug assembly,
- The HY7000 sensing element assembly.

The gauge assembly consists of a gauge body, a pressure gauge (0-40 psi), a temperature gauge, and a bleed valve.

The sensing element on the HY7000 probe is about 3 inches long and consists of a thin-walled tube which is sealed from the process and allows nascent hydrogen to permeate.

The minimum insertion length (I.L.) of the probe is 6 inches and can be ordered in 1 inch increments.

The HY7001 housing can be machined to fit the flat surfaces of tanks or radiused to fit pipe diameters. The HY7001 consists of two subassemblies, which are sold separately:

- The gauge assembly
- The non-intrusive housing (that can be welded directly to the exterior of the pipe wall or vessel)

Specifications	
Probe Body	316 Stainless Steel
Temperature Rating	260°C / 500°F
Pressure Rating	3600psi / 245 Bar
Mounting	- High Pressure Access system with Hollow Plug (HY7000) - Direct Mount (HY7001)

7.4
Model SP7000
Retrieval Sand Probe
 For The High Pressure Two Inch Access Fitting System

The Model SP7000 sand probes are used to detect erosion in flow lines caused by abrasive particles such as sand. One end of the probe is attached to a tee-type, high pressure access fitting with a solid plug by means of a sand probe nut. The other end is sealed, thin walled tube placed within the process stream to be exposed to particulate flowing through the system. (To minimise the effects of corrosion and thus more accurately detect erosion with the stream, the exposed element is made of stainless steel).

As particulates suspended in the process flow impact the surface of the sensing element, a hole is eventually eroded through the element. Once penetration has occurred, the system pressure then travels up the tube, into the access fitting body, and through a nipple and valve to a pressure gauge assembly. The pressure gauge shows that the element has been breached.

The components of the retrievable mechanical sand probe system are as follows:

- 1) Access fitting cover
- 2) Access fitting body
- 3) Solid plug assembly
- 4) Solid Plug O-ring
- 5) Solid Plug Primary Packing
- 6) Sand Probe Nut
- 7) 100mm TBE NPT Pipe Nipple
- 8) Shut Off Valve
- 9) Pressure Gauge
- 10) Sand Probe

Other designs are available, access fitting may be flanged type, threaded tee or flanged tee, with valve to suit.

The minimum order length for the sand probe is 3.75inch, up to any length in quarter inch increments.

If required, electronic pressure sensors (supplied by others) can be connected in place of the pressure gauge. These would enable alarm systems to signal the exact moment when failure occurs, to ensure early detection.

Picture is for illustrative purposes only, supplied product may differ

For alloys, sizes, or other special requirements not listed, please contact our sales department.

8.0 Catch Pot Corrosion & Sampling Trap

Sub-Section No.

8.1 Catch Pot Corrosion & Sampling Trap

8.1 Catch Pot Corrosion Monitoring & Sampling Trap

Catch Pots provide a removable corrosion monitoring station, mounted to the pipe via a suitable valve, with multiple mounting points for direct mount corrosion monitoring products to give a Corrosion Monitoring Trap.

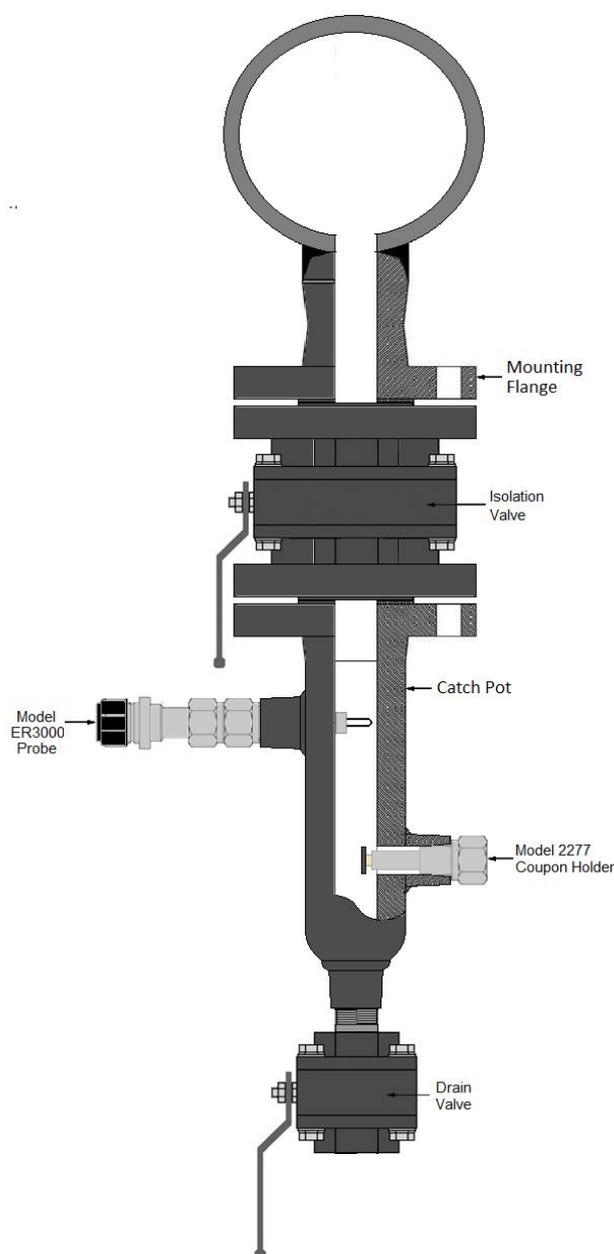

Corrosion Monitoring Traps are important in multi-phase systems where corrosion does not occur uniformly through the pipe.

Corrosion Monitoring Traps allow simulation of areas where water may condense from the process gas, where water may gather at low points in the line and where water may form a trapped wet sludge.

To monitor such situations using conventional corrosion monitoring systems is difficult if not impossible. The Corrosion monitoring trap allows this, thus providing a “worst case” corrosion monitoring scenario.

Catch Pots are be manufactured in customer’s requested materials of construction, dimensions, quantity of mounting thredolets and flange rating.

The example shown has multiple FNPT thredolets for corrosion monitoring products, typically there would be 3 thredolets plus an additional thredolet at the base for a suitable shut off valve for draining

Typical Accessories:

Isolation Valve*

Model 2277 Disc Coupon Holder

Model FC6100 Bio Probe Holder

Model ER3000 Electrical Resistance Probe

Model LP3000 LPR Probe

Drain / Sampling Valve*

*Single Isolation Or Double Block and Bleed Valves are available

The ER and LPR probes can be connected to permanently installed Data Transmitters or Data-Loggers, or readings can be taken periodically using hand held portable instruments.

The Catch Pot is custom designed for each application, with flange rating, materials of construction, number and size of thredolets and valve design to suit the specific application. Please contact our sales department for further information.

9.1 DNV Design Verification Report

RCSL's Triseal Two Inch Access Fitting System Design was reviewed by DET Norske Veritas' London project Approval Centre.

The Design Verification Report of their independent review is attached.

DET NORSKE VERITAS

DESIGN VERIFICATION REPORT

(Independent Review Certificate)

Manufacturer : Rose Corrosion Services Ltd
Equipment : Assorted 2" pipe access fitting system components as noted below.

Body, A/F – Flarweld, C/W ½" Sch 160 Flg. Tee
Body, A/F – 2" ANSI RF C/W ½" Sch 160 Flg. Tee
Body, A/F – Flarweld
Body, A/F – Butt weld
Body, A/F – Butt weld, C/W ½" Sch Flg. Tee
Body, A/F – 2" ANSI RJ
Body, A/F – 2" ANSI RJ, C/W ½" Sch 160 Flg. Tee
Body, A/F – 2" ANSI RF

This is to certify that the design of the above noted equipment has been reviewed and found to comply with:

- ASME B31.3 2006 Chemical Plant and Petroleum Refinery Piping
- Essential Safety Requirements of the Pressure Equipment Directive 97/23/EC, as defined in Appendix A attached.

The following design codes/standards were used as reference:

- API RP 14E Recommended Practice for Design and Installation of Offshore Production Platform Piping System
- ASME / ANSI B16.5 Pipe Flanges and Flanged Fittings
- NACE MR-01-75 Sulfide Stress Cracking Resistant – Metallic Materials for Oilfield Equipment

The design verification is given subject to the following limitations:

- Maximum working pressure of 6,000 psig
- Design temperature range for ASTM A350 LF2 material is -50°F to +500°F *
- Design temperature range for all other listed materials is -20°F to +500°F *
- Sour service (H₂S), except where noted
- No permanent jointing

* Note: the minimum temperature may be limited by the Particular Material Appraisals (refer to 7.5 of appendix).

If any person suffers loss or damage which is proved to have been caused by any negligent act or omission of Det Norske Veritas, then Det Norske Veritas shall pay compensation to such person for his proved direct loss or damage. However, the compensation shall not exceed an amount equal to ten times the fee charged for the service in question, provided that the maximum compensation shall never exceed USD 2 million. In this provision "Det Norske Veritas" shall mean the Foundation Det Norske Veritas as well as all its subsidiaries, directors, officers, employees, agents and any other acting on behalf of Det Norske Veritas.

The design verification is given for manufacture of the components from any of the following materials:

- AISI 1022
- ASTM A105
- ASTM A350 LF2
- ASTM A182 Grades 304, 316 and 316L
- ASTM A790 Duplex (UNS S31803 and S32304)
- ASTM B381 Grade F2 (not sour service)
- ASTM B348 Grade F2 (not sour service)
- UNS 32750
- UNS 32760
- ASTM A694

The following Rose Corrosion Services drawings formed the basis of review (all initial issues, no revision number):

Number	Document Title	Dated
SK5002	Body, A/F – Flarweld, C/W ½” Sch 160 Flg. Tee	5/2/93
SK5701	Body, A/F – 2” ANSI RF C/W ½” Sch 160 Flg. Tee	5/2/93
SK5001	Body, A/F – Flarweld	5/2/93

9.2 Order Length Calculations For Retrievable Products

Please use the listed calculations to obtain the order lengths for our products.

Should any assistance be required please contact our Sales Department.

Length Calculations For Retrievable Strip Coupon Holders (HC1** -****)

The calculated length should be rounded to the previous 0.125inch manufacturing length increment.

Flare-weld fittings

Intrusive at Entry Point

$$FH + WG + WT - (2.5 + \frac{1}{2}EL)$$

Centre of Line

$$FH + WG + (PD/2) - (2.5 + \frac{1}{2}EL)$$

Bottom of line (1/4" gap)

$$FH + WG + PD - (0.25 + 2.5 + WT + EL)$$

Customer specified intrusion length

$$FH + WG + WT + IL - (2.5 + EL)$$

Flanged fittings

Intrusive at Entry Point

$$FH + FG + MF + WG + WT - (2.5 + \frac{1}{2}EL)$$

Centre of Line

$$FH + FG + MF + WG + (PD/2) - (2.5 + \frac{1}{2}EL)$$

Bottom of line (1/4" gap)

$$FH + FG + MF + WG + PD - (0.25 + 2.5 + WT + EL)$$

Customer specified intrusion length

$$FH + FG + MF + WG + WT + IL - (2.5 + EL)$$

FH = Fitting Height

WG = Weld Gap (if not included in mating flange height). Usually estimated at 0.0625inch.

FG = Flange Gap. Usually estimated at 0.0625inch.

MF = Mating Flange Height From Pipe Outside Diameter (may be referred to as "nozzle stand-off").

WT = Wall Thickness

PD = Pipe Outside Diameter

0.25 = Gap from tip of coupon to opposite pipe wall

2.5 = Calculation constant

EL = Coupon Effective Length

"3inch" Strip Coupon = 1.625inch

"6inch" Strip Coupon = 4.75inch

IL = Intrusion Length

9.2 Order Length Calculations For Retrievable Products

Length Calculations For Retrievable Ladder (2inch Strip) Coupon Holders (HC2**-****)

The calculated length should be rounded to the previous 0.125inch manufacturing length increment.

Flare-weld fittings

Flush to the line
Not available

Centre of Line
 $FH + WG + (PD/2) - 2.5$

Bottom of line (1/4" gap)
 $FH + WG + PD - (0.25 + 2.5 + WT)$

Customer specified intrusion length
 $FH + WG + WT + IL - 2.5$

Flanged fittings

Flush to the line
Not available

Centre of Line
 $FH + FG + MF + WG + (PD/2) - 2.5$

Bottom of line (1/4" gap)
 $FH + FG + MF + WG + PD - (0.25 + 2.5 + WT)$

Customer specified intrusion length
 $FH + FG + MF + WG + WT + IL - 2.5$

FH = Fitting Height

WG = Weld Gap (if not included in mating flange height). Usually estimated at 0.0625inch

FG = Flange Gap. Usually estimated at 0.0625inch

MF = Mating Flange Height from pipe outside diameter (may be referred to as "nozzle stand-off")

WT = Wall Thickness

PD = Pipe Diameter (Outside)

0.25 = Gap from tip of coupon to opposite pipe wall

2.5 = Calculation constant

IL = Intrusion Length

Note:

The ladder coupon holder is designed to hold 3 pairs of 2inch strip coupons (total 6 coupons). These would be at the top, centre and bottom of the pipe. Therefore RCSL will require detail of the application to provide a correctly designed coupon holder.

RCSL can supply ladder coupon holders suitable to hold other quantities of coupons if required.

Note that due to space restrictions within the pipe it may not be possible to fit 3 pairs of coupons. The main guide is as follows:

≤4inch Pipes = 1 pair of coupons

6inch Pipe = 2 pairs of coupons

≥8inch Pipe = ≥3 pairs of coupons *[Subject to pipe internal diameter]*

9.2 Order Length Calculations For Retrievable Products

Length Calculations For Retrievable Flush Disc Coupon Holders (HC3**-****)

The calculated length should be rounded to the previous 0.125inch manufacturing length increment.

Flare-weld fittings

Intrusive at Entry Point
 $FH + WG + WT - 2.815$

Centre of Line
 $FH + WG + (PD/2) - 2.815$

Bottom of line (1/4" gap)
 $FH + WG + PD - (W.T. + 3.125)$

Customer specified intrusion length
 $FH + WG + WT + IL - 2.815$

Bottom of line (1/4" gap)
 $FH + FG + MF + WG + PD - (W.T. + 3.125)$

Customer specified intrusion length
 $FH + FG + MF + WG + WT + IL - (2.5 + EL)$

FH = Fitting Height

WG = Weld Gap (if not included in mating flange height). Usually estimated at 0.0625inch.

FG = Flange Gap. Usually estimated at 0.0625inch.

MF = Mating Flange height from pipe outside diameter (may be referred to as "nozzle stand-off").

WT = Wall Thickness (Pipe)

PD = Pipe Diameter (Outside)

0.25 = Gap from tip of coupon to opposite pipe wall

2.815 = Calculation constant

3.125 = Calculation constant

IL = Intrusion Length

9.2 Order Length Calculations For Retrievable Products

Length Calculations For Retrievable Flush Disc Coupon Holders (HC4**-****)

The length formulas are as per the calculations for standard retrievable fixed length flush disc coupon holder (HC3**-****).

The adjustment range of the adjustable length flush disc coupon holder is 1inch. Therefore it is suggested that the required length is calculated and then 0.5inch is subtracted from the result, in order that the required length is roughly central within the adjustment range.

The calculated length should be rounded to the previous 0.25inch manufacturing length increment.

The minimum order length for adjustable length flush disc coupon holder is 2.5inch.

Please contact RCSL should assistance be required.

9.2 Order Length Calculations For Retrievable Products

Length Calculations For Retrievable Multiple Disc Coupon Holders (HC5**-****)

The calculated length should be rounded to the previous 0.125inch manufacturing length increment.

Flare-weld fittings

Flush to the line
Not available

Centre of Line
 $FH + WG + (PD/2) - 2$

Bottom of line (1/4" gap)
 $FH + WG + PD - (0.25 + 2.5 + WT)$

Customer specified intrusion length
 $FH + WG + WT + IL - 2$

Flanged fittings

Flush to the line
Not available

Centre of Line
 $FH + FG + MF + WG + (PD/2) - 2$

Bottom of line (1/4" gap)
 $FH + FG + MF + WG + PD - (0.25 + 2.5 + WT)$

Customer specified intrusion length
 $FH + FG + MF + WG + WT + IL - 2$

FH = Fitting Height

WG = Weld Gap (if not included in mating flange height). Usually estimated at 0.0625inch

FG = Flange Gap. Usually estimated at 0.0625inch

MF = Mating Flange Height from pipe outside diameter (may be referred to as "nozzle stand-off")

WT = Wall Thickness

PD = Pipe Diameter (Outside)

0.25 = Gap from tip of coupon to opposite pipe wall

2 = Calculation constant

2.5 = Calculation constant

IL = Intrusion Length

Note:

The multiple disc holder is designed to hold 3 pairs of disc coupons. These would be at the top, centre and bottom of the pipe. Therefore RCSL will require detail of the application to provide a correctly designed coupon holder.

RCSL can supply multiple disc holders suitable to hold other quantities of coupons if required.

Note that due to space restrictions within the pipe it may not be possible to fit 3 coupons. The main guide is as follows:

≤3inch Pipes = 2 coupons
4inch Pipe = 3 coupons
≥6inch Pipe = ≥3 coupons

9.2 Order Length Calculations For Retrievable Products

Length Calculations For Other Retrievable Coupon Holders

Please contact RC SL

9.2 Order Length Calculations For Retrievable Products

Length Calculations for Retrievable ER Probes.

The calculated length should be rounded to the previous 0.125inch manufacturing length increment.

Flare-weld fittings

Flush to the line

$$FH - 5.25 + 1.75 + WG + WT$$

Centre of Line

$$FH - 5.25 + 1.75 + WG + (PD/2) \quad [please see note regarding probe elements]$$

Bottom of line (1/4" gap)

$$FH - 5.25 + 1.75 + WG + PD - WT - 0.25$$

Customer specified intrusion length

$$FH - 5.25 + 1.75 + WG + WT + IL$$

Flanged fittings

Flush to the line

$$FH - 5.25 + 1.75 + FG + MF + WG + WT$$

Centre of Line

$$FH - 5.25 + 1.75 + FG + MF + WG + (PD/2) \quad [please see note regarding probe elements]$$

Bottom of line (1/4" gap)

$$FH - 5.25 + 1.75 + FG + MF + WG + PD - (WT + 0.25)$$

Customer specified intrusion length

$$FH - 5.25 + 1.75 + FG + MF + WG + WT + IL$$

FH = Fitting Height

5.25 = Calculation constant

1.75 = Calculation constant

WG = Weld Gap (if not included in mating flange height). Usually estimated at 0.0625inch.

FG = Flange Gap. Usually estimated at 0.0625inch.

MF = Mating Flange height from pipe outside diameter (may be referred to as "nozzle stand-off").

WT = Wall Thickness

PD = Pipe outside Diameter

0.25 = Gap from tip of probe element to opposite pipe wall

IL = Intrusion Length

Notes:

RCSL considers it best practice for centre of the line applications that the probe element straddles the pipe centre line, therefore we would recommend that 1/2 the element length is added on to the calculated length where possible.

The probe element lengths are specified on the relevant data sheets.

For pipes of 4inch diameter and less please check that the probe element can straddle the pipe centre line without contacting the opposite pipe wall should the pipe internal diameter be insufficient.

Please review the individual probe data sheets for details of the minimum probe lengths.

Please contact RCSL if the required length is less than the minimum probe length.

9.2 Order Length Calculations For Retrievable Products

Length Calculations for Retrievable 2 Electrode LPR Probes.

The calculated length should be rounded to the previous 0.125inch manufacturing length increment.

Flare-weld fittings

Flush to the line
Not available

Intrusive at Entry
 $FH - 5.25 + 1.75 + WG + WT + 1.25$

Centre of Line
 $FH - 5.25 + 1.75 + WG + (PD/2)$ *[please see note regarding probe electrodes]*

Bottom of line (¼" gap)
 $FH - 5.25 + 1.75 + WG + PD - (WT + 0.25)$

Customer specified intrusion length
 $FH - 5.25 + 1.75 + WG + WT + IL$

Flanged fittings

Flush to the line
Not available

Intrusive at Entry
 $FH - 5.25 + 1.75 + FG + MF + WG + WT + 1.25$

Centre of Line
 $FH - 5.25 + 1.75 + FG + MF + WG + (PD/2)$ *[please see note regarding probe electrodes]*

Bottom of line (¼" gap)
 $FH - 5.25 + 1.75 + FG + MF + WG + PD - (WT + 0.25)$

Customer specified intrusion length
 $FH - 5.25 + 1.75 + FG + MF + WG + WT + IL$

FH = Fitting Height

5.25 = Calculation constant

1.75 = Calculation constant

1.25 = Electrode Length

WG = Weld Gap (if not included in mating flange height). Usually estimated at 0.0625inch.

FG = Flange Gap. Usually estimated at 0.0625inch.

MF = Mating Flange height from pipe outside diameter (may be referred to as "nozzle stand-off").

WT = Wall Thickness

PD = Pipe outside Diameter

0.25 = Gap from tip of probe element to opposite pipe wall

IL = Intrusion Length

Notes:

The probes utilise electrodes that are 1.25inch long. RCSL considers it best practice for centre of the line applications that the electrodes straddle the pipe centre line, therefore we would recommend that ½ the electrode length is added on to the calculated length where possible.

Please review the individual probe data sheets for details of the minimum probe length.

Please contact RCSL if the required length is less than the minimum probe length.

9.2 Order Length Calculations For Retrievable Products

Length Calculations for Retrievable 3 Electrode LPR Probes.

Note that the calculated lengths do not include the probe electrode length. Please see the note regarding the probe electrode length.

The calculated length should be rounded to the previous 0.125inch manufacturing length increment.

 $FH - 5.25 + 1.75 + FG + MF + WG + (PD/2) - LPEL$ *[Please see note regarding centre of the line]*

Bottom of line (1/4" gap)
 $FH - 5.25 + 1.75 + FG + MF + WG + PD - (WT + 0.25 LPEL)$

Customer specified intrusion length
 $FH - 5.25 + 1.75 + FG + MF + WG + WT + IL - LPEL$

FH = Fitting Height

5.25 = Calculation constant

1.75 = Calculation constant

1.25 = Electrode Length

WG = Weld Gap (if not included in mating flange height). Usually estimated at 0.0625inch.

FG = Flange Gap. Usually estimated at 0.0625inch.

MF = Mating Flange height from pipe outside diameter (may be referred to as "nozzle stand-off").

WT = Wall Thickness

PD = Pipe outside Diameter

LPEL = LPR Probe Electrode Length

0.25 = Gap from tip of probe element to opposite pipe wall

IL = Intrusion Length

Notes:

The probes electrodes are of different lengths subject to the material. Please review the electrode lengths and ensure that the electrode will fit within the pipe bore.

RCSL considers it best practice for centre of the line applications that the electrodes straddle the pipe centre line, therefore we would recommend that 1/2 the electrode length is added on to the calculated length where possible.

Please review the individual probe data sheets for details of the minimum probe length.

Please contact RCSL if the required length is less than the minimum probe length.

9.2 Order Length Calculations For Retrievable Products

Length Calculations for Retrievable Flush Electrode LPR Probes.

The calculated length should be rounded to the previous 0.125inch manufacturing length increment.
